

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Mon, Aug 17 2026

NEUTRAL Mixed macro signals, cautious crypto sentiment and geopolitical risks are keeping markets in a neutral balance.

The market backdrop remains neutral as opposing risk-on and risk-off signals largely offset each other. The DXY fell 0.19% to **99.48**, while Nasdaq 100 futures gained 0.42%; however, SMH declined 0.22%, pointing to limited weakness in technology. Brent crude stood at **\$88.33** and gold rose 1.58%, with elevated energy prices and geopolitical uncertainty creating pressure on the inflation and growth outlook. Total crypto market capitalization reached **\$2.26 trillion**, up 0.61% over 24 hours, but BTC remained down 2.3% over seven days and the Fear & Greed index stayed in Fear at **31**. FOMC meeting minutes due on August 19 will be the key event for rate-path and liquidity expectations this week; no CPI, PPI, PCE release or new FOMC rate decision is listed.

STRATEGIC RESEARCH FOCUS

COMMODITIES

Is the Hormuz shock becoming a lasting supply risk?

The stalled US-Iran talks and slower tanker traffic through Hormuz require testing whether elevated oil prices reflect a temporary geopolitical premium or a durable supply disruption. The key signals are a confirmed supply shortfall in the EIA's weekly inventories, production and trade data, together with continued relative strength in energy equities.

PRIMARY SOURCES / REPORTS:

- **EIA — Weekly Petroleum Status Report** — Review weekly changes in crude and product inventories, refinery utilization, production, imports, exports and the supply-demand balance.
- **Reuters — Oil rises as US-Iran peace talks stall, Hormuz shipping slows - Reuters** — Track the stalled talks, the oil-price rise and the reported slowdown in Hormuz shipping.
- **Reuters — Shipping slows through Strait of Hormuz after tanker attacks, data shows - Reuters** — Examine quantitative changes in tanker traffic and Hormuz transit activity to assess the attacks' effect on physical supply flows.

MACRO

Is the oil shock repricing the Fed's rate path?

Persistently high oil prices can affect both growth and inflation, shaping how markets interpret the Fed's policy path; in the available data, the DXY has eased to 99.48 while Nasdaq 100 futures are higher. The research question is how the 19 August FOMC minutes balance energy-driven inflation risks against weaker growth; the key threshold is a material change in rate-cut expectations ahead of the September meeting.

PRIMARY SOURCES / REPORTS:

- **Federal Reserve — FOMC Calendar & Statements** — Read the 19 August FOMC minutes for discussion of inflation, energy prices, growth and the policy path.
- **CME FedWatch Tool** — Compare meeting-by-meeting rate probabilities and changes in market pricing before and after the minutes.
- **US Treasury — Daily Yield Curve Rates** — Monitor short- and long-term Treasury yields and how oil-related inflation and growth risks are reflected across the curve.

CRYPTO

Is the crypto rebound real demand or a leveraged reaction?

Although total crypto market capitalization rose over 24 hours, a fear reading of 31, a Coinbase premium of -0.0973 and \$56.2 million of spot Bitcoin ETF outflows point to weak institutional demand; Ethereum ETF flows were zero. The research question is whether support is coming from derivatives leverage rather than new spot money; the signals to watch are BTC holding 63,028 support and 64,450 resistance, alongside funding rates and ETF flows turning positive together.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Track daily IBIT, FBTC and total spot Bitcoin ETF inflows and outflows to test whether institutional demand confirms the price move.
- **Coinglass — Derivatives Data** — Compare BTC and ETH funding rates, open interest, liquidations and derivatives leverage concentration with the price action.
- **Coinbase Premium and market data** — Monitor whether the Coinbase premium remains negative, how BTC behaves around 63,028 support and 64,450 resistance, and whether spot demand is confirmed.

TOP STORIES

REUTERS · 02:21

Indian shares fall as crude remains at elevated levels - Reuters

AI Insight: Elevated crude prices and falling Indian equities show how energy costs can pressure margins and growth expectations in oil-importing economies. With Brent holding at \$88.33, Fear & Greed at 31 and spot Bitcoin ETFs recording outflows, the backdrop remains a constraint on risk appetite.

REUTERS · 01:17

Asian shares mark time as Gulf war keeps oil prices up - Reuters

AI Insight: Higher oil prices linked to the Gulf war are reinforcing a wait-and-see stance across Asian equities. The 0.19% decline in the DXY and 0.42% rise in Nasdaq 100 futures offer some support, but the negative Coinbase premium and \$56.2 million ETF outflow on August 14 indicate that regional risks are still being priced cautiously in global portfolios.

REUTERS · 00:31

Oil rises as US-Iran peace talks stall, Hormuz shipping slows - Reuters

AI Insight: The stalled US-Iran talks and slower traffic through the Strait of Hormuz are increasing the risk premium in energy markets. Despite positive BTC funding, the negative 25Δ risk reversal and BTC's 2.3% seven-day decline suggest that investors holding directional longs are also seeking downside protection.
