

WEEKLY DEEP DIVE

Strategic Liquidity, Macro Themes & Crypto Rotation

Sun, Sep 20 2026

Data cut: 2026-09-20 21:41 TRT

WEEK IN ONE MINUTE

NEUTRAL NEUTRAL: Supportive liquidity and strong rotation are offset by inflation and weak flow quality.

The week presents a NEUTRAL setup defined by the balance between supportive liquidity, persistent inflation, and a fragile flow structure. BTC stands at 81176 after a weekly gain of 5.0%, while AVAX's 48.6% change demonstrates the strength of selective rotation. In contrast, ETH ETF weekly net flow of -140.60000000000002M and the negative Coinbase premium raise questions about the quality of demand behind the advance. The central conclusion is that risk appetite remains intact, but broad-based confirmation has not yet emerged.

THREE THEMES OF THE WEEK

THEME 1 · LIQUIDITY SUPPORT

Financial conditions remain supportive with $nfc_current = -0.56$, while global liquidity stands at \$6.75T. This backdrop supports risk assets, although inflation pressure limits its force.

THEME 2 · SELECTIVE ROTATION

AVAX leads the strong rotation with a weekly change of 48.6%, highlighting selective risk-taking rather than a broad-based advance. BTC's weekly performance of 5.0% also supports constructive momentum.

THEME 3 · FLOW DIVERGENCE

ETH ETF weekly net flow was -140.60000000000002M, while BTC ETF flow remained positive at 6.100000000000023M. The negative Coinbase premium and rising open interest increase caution about the quality of spot demand behind the rally.

US Inflation Path (CPI, Core CPI, Core PCE YoY — 5-Year) · series date 2026-07

What happened: In July 2026, core PCE was 3.34, headline CPI was 3.52, and core CPI was 2.67.

What it means: As long as core PCE remains above 3.34, downside risk persists for rate-cut-sensitive BTC and growth equities into the 2026-10-28 FOMC meeting.

LIQUIDITY REGIME

US Federal Reserve Net Liquidity (3-Year Weekly) · series date 2026-09-20

Chicago Fed Financial Conditions Index — NFCI (3-Year Weekly) · series date 2026-09-11 -0.560 (-0.002 w/w)

Above 0 = tighter-than-average conditions, below 0 = looser.

What happened: The Fed balance sheet stands at \$6.75T; NFCI fell to -0.56 while net liquidity rose to 5.868944.

What it means: As long as NFCI remains below -0.56, easier financial conditions support upward positioning in Bitcoin and risk assets over the near term.

25 Sep Fri	17:00	● Revised UoM Inflation Expectations	USD	4.6%	N/A	

What happened: This week's calendar includes euro-area flash PMIs, US jobless claims, and consumer sentiment and inflation expectations, while the next FOMC meeting is 38 days away.

What it means: If US inflation expectations remain above 4.6%, rate-cut expectations could be constrained in the near term, creating upside risk for the dollar and bond yields and downside risk for Bitcoin and equities.

+0.47	+0.23	+0.62	+0.58	-0.39	-0.40	-0.26	-0.10

What happened: BTC's 30-day correlation with gold is 0.62 and its 90-day correlation is 0.58, while its correlations with DXY are -0.39 and -0.4, respectively.

What it means: If the gold-BTC relationship remains above 0.62, defensive macro flows could support BTC in the short term; DXY strength poses downside risk to BTC given the -0.39 threshold.

CUMULATIVE SPOT BTC ETF NET FLOWS (SINCE LAUNCH)

What happened: In the latest week, Bitcoin ETFs were broadly flat with 6.100000000000023M in net inflows, while Ethereum ETFs recorded -140.60000000000002M in net outflows.

What it means: As long as Ethereum ETF outflows persist and Bitcoin ETF net flows do not move decisively into positive territory, short-term positioning favors downside exposure in ETH and caution in BTC.

STABLECOIN SUPPLY & SHARE

What happened: As of 2026-09-20, total stablecoin supply stands at 309.998, with USDT at 183.301 and USDC at 74.335.

What it means: As long as supply remains below the 310.429 threshold, there is limited support for short-term upside positioning in crypto risk assets driven by fresh liquidity.

What happened: AI & Decentralized Compute led sector rotation at 20.8, while AVAX gained 48.6, UNI 38.8, and SUI 24.7.

What it means: As risk appetite broadens, short-term positioning favors AVAX, UNI, and SUI; RENDER retains upside support while AI & Decentralized Compute holds above 20.8.

What happened: Bitcoin spot is 81176, above the 200-day average of 70504.6470703125 and the 200-week weighted average of 65494.39731445313, while the Mayer Multiple stands at 1.151.

What it means: As long as BTC holds above 70504.6470703125, medium-term risk appetite supports long exposure; a break below that level is the threshold for defensive positioning.

What happened: The Coinbase premium remains at -0.03399421987451636, while the 4-hour BTC trend is Bearish and BTC open interest has risen 17.723742185880383 over 7 days.

What it means: For BTC, 69509.94 is the key short-term downside threshold; a break below it would raise selling pressure and liquidation risk alongside elevated leverage.
