Global Macro & Crypto Market Intelligence

Sat, Jul 25 2026

RISK-OFF Geopolitical escalation, ETF outflows, and negative funding rates suppress risk appetite.

Global markets are trading in a distinctly risk-off tone today. **BTC** hovers at **\$63,977** with a 24-hour loss of **2.0%**; the 4-hour technical structure is flagged 'Bearish' with key support at **\$63,564**. The Crypto Fear & Greed Index remains firmly in 'Fear' territory at **27**, while total crypto market cap has slipped to **\$2.27T**. On the macro front, the **US 10-Year Treasury Yield** holds elevated at **4.679%**, VIX sits at **18.58**, and NASDAQ 100 Futures are off **1.18%** at **28,282**. Critically, the **FOMC meeting is just 4 days away** on July 29; with the dot-plot median at **3.8%**, any shift in forward guidance will be closely scrutinized. On the geopolitical front, escalating conflict in Yemen and ongoing Iran tensions have pushed Brent crude to **\$96.78**, while gold at **\$4,067** reflects safe-haven demand.

STRATEGIC RESEARCH FOCUS

CRYPTO

Bitcoin ETF Two-Day Outflow Streak: Is Institutional Demand Breaking Down?

Spot Bitcoin ETFs recorded a total outflow of \$240.1 million on July 24, 2026, with IBIT alone accounting for \$212.2 million in negative flows. Ethereum ETFs saw \$70.7 million in outflows on the same day. The Coinbase premium has remained negative throughout the week, approaching -0.10 today, signaling retreat by both US retail and institutional buyers. BTC funding rate is negative (-0.0013), the fear/greed index stands at 27 (Fear), and the 4-hour trend is Bearish: the critical threshold to watch is whether the 63,564 support level holds.

PRIMARY SOURCES / REPORTS:

- **Farside Bitcoin ETF Flow Data** — Check the daily net flow table for IBIT, FBTC, and other funds on July 24–25 rows to assess whether outflow momentum is accelerating.
- **Farside Ethereum ETF Flow Data** — Compare ETHA and FETH daily flow columns to determine whether ETH outflows are developing in tandem with BTC or independently.
- **Coinglass Derivatives Data** — Review BTC and ETH open interest changes and funding rate history; assess what the combination of negative funding and ETF outflows has historically implied for price action.

POLICY

Iran-US Tensions and Tanker Attack in Gulf Waters: Where Is Geopolitical Risk Priced?

A Mozambique-flagged LPG tanker attacked in Iranian waters, Saudi coalition airstrikes on Houthi targets in Hodeidah, and Trump's statement that 'Iran is talking but not yet ready for a deal' all converged on the same day. This triple signal points to a concrete disruption risk for crude oil and LNG flows through the Strait of Hormuz. In market data, the energy sector (XLE) rose only 0.40% today while the VIX retreated to 18.6, suggesting geopolitical risk is not yet fully priced in. Key signals to watch: Hormuz transit volumes and a sudden widening of the Brent-WTI spread.

PRIMARY SOURCES / REPORTS:

- **Reuters — Mozambique-Flagged LPG Tanker Attack** — Read the location of the attack, vessel owner, and cargo type; note Iran's official stance on the incident.
- **Reuters — Trump: Iran Not Yet Ready for Deal** — Note Trump's framing of the negotiation timeline and any hints about conditions; evaluate the context of the phrase 'not yet ready'.
- **EIA Weekly Petroleum Status Report** — Review crude oil and refined product inventory changes; assess how long the US inventory buffer could absorb a Gulf supply disruption scenario.

MACRO

4 Days to July 29 FOMC: Is the 10-Year Yield and 2s10s Spread Contradicting Market Expectations?

With four days to go before the July 29 FOMC meeting, the 10-year US Treasury yield fell to 4.679 (daily change -0.51 bps) while the 2-year held at 4.37, pushing the 2s10s spread to 30.9 bps. The Fed's 2026 dot median stands at 3.80 — does current market pricing align with that path? In this elevated yield environment, NASDAQ 100 futures fell 1.18% while the semiconductor ETF (SMH) dropped 3.27%, illustrating the transmission of long-end rate pressure to growth equities. Key signal to watch: whether CME FedWatch keeps July cut probability near zero and what September pricing implies for the easing cycle.

PRIMARY SOURCES / REPORTS:

- **CME FedWatch Tool** — Check the probability table for rate changes at the July 29 meeting and the implied cut expectations for September 2026; compare with the prior week's pricing.
- **Federal Reserve — FOMC Calendar & Statements** — Review any preparatory materials published for the July 29 meeting and prior meeting minutes; assess whether the emphasis on 'data dependence' has shifted.
- **US Treasury — Daily Yield Curve Rates** — Download the 2-year and 10-year yield series for the last 5 business days and chart how the 2s10s spread has moved in the pre-FOMC window.

Saudi-led coalition says it strikes Houthi targets in Yemen's Hodeidah - Reuters

AI Insight: The Saudi-led coalition's strikes on Yemen's Hodeidah port reignite risks to Red Sea trade routes, serving as a key driver behind Brent crude's move to \$96.78 and keeping short-term upward pressure alive in energy markets.

REUTERS · 21:15

Yemen teeters towards renewed war in shadow of Iran conflict - Reuters

AI Insight: The growing probability of Yemen sliding back into full-scale war deepens the risk of Iran's regional conflict spilling over, representing a significant tail risk for global energy supply and supporting demand for safe-haven assets like gold and oil.

REUTERS · 20:37

Trump says he trusts Russia and China's leaders not to enable Iran - Reuters

AI Insight: Trump's statement that he trusts Russia and China not to enable Iran offers a short-term de-escalation signal; however, markets remain cautious about pricing in this rhetoric without concrete diplomatic follow-through.
