# WEEKLY DEEP DIVE

*Strategic Liquidity, Macro Themes & Crypto Rotation*

Sun, Nov 8 2026

Data cut: 2026-11-08 23:22 TRT

## WEEK IN ONE MINUTE

**NEUTRAL** The NEUTRAL regime reflects a fragile market balance in which supportive financial conditions offset weak fund flows and defensive positioning.

The week's central picture is the tension between supportive traditional financial conditions and weakening crypto-native demand. btc_etf_weekly_total_flow_m=-1281.6999999999998 while stablecoin_total fell to 292.361, indicating insufficient new capital formation. btc_drawdown=-39.24 and btc_ndx_corr_30d=0.74 show that Bitcoin carries cyclical damage while remaining sensitive to technology risk. Inflation outcomes and the direction of ETF flows will determine which way the fragile balance breaks.

## THREE THEMES OF THE WEEK

THEME 1 · **INSTITUTIONAL OUTFLOWS**

btc_etf_weekly_total_flow_m=-1281.6999999999998 and eth_etf_weekly_total_flow_m=-365.2 show a pronounced weakening in institutional demand. Durable risk appetite may remain limited until flows improve.

THEME 2 · **LIQUIDITY BALANCE**

nfci_current=-0.459 indicates supportive financial conditions, while stablecoin_total=292.361 is below stablecoin_total_previous=298.364. Traditional liquidity support has not yet translated into crypto-native capital expansion.

THEME 3 · **DEFENSIVE POSITIONING**

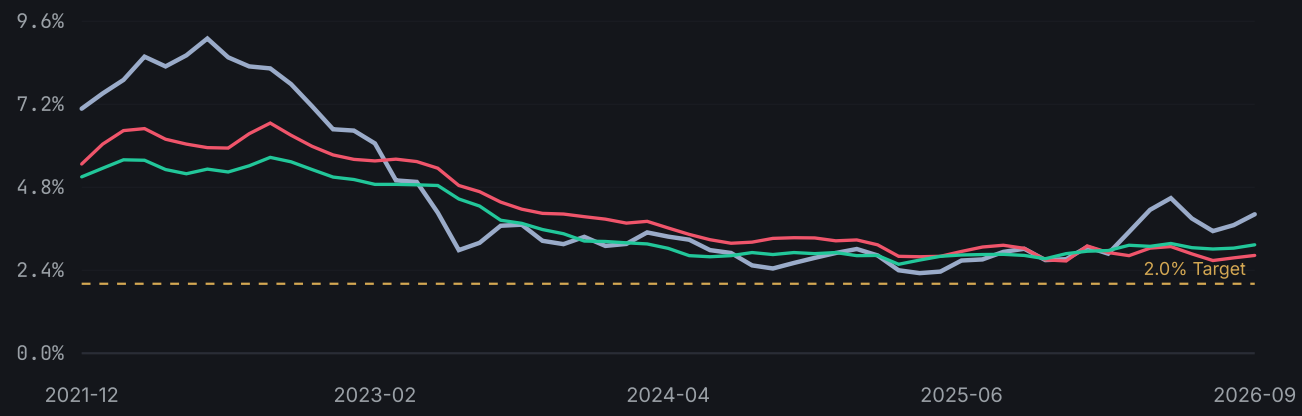

risk_reversal_25d=-4.490000000000002 and fear_and_greed_value=28 show persistent demand for downside protection and cautious sentiment. Positive BTC funding does not fully confirm this defensive options signal.

### US Inflation Path (CPI, Core CPI, Core PCE YoY — 5-Year) · series date 2026-09

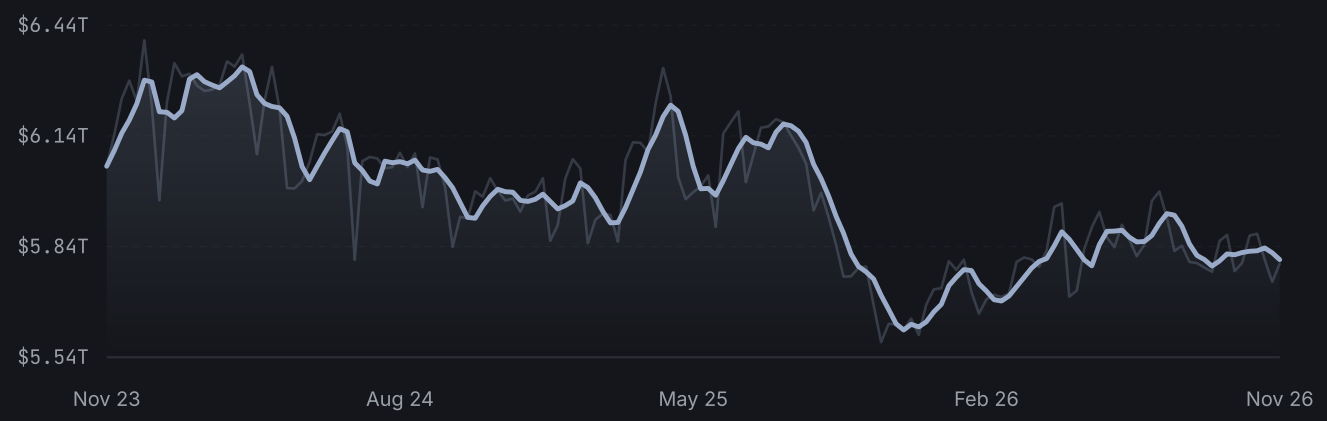

**What happened:** In September 2026, headline CPI was 4.0, core CPI was 2.82, and core PCE was 3.12, while the November 10 monthly CPI forecast stands at 0.3%.

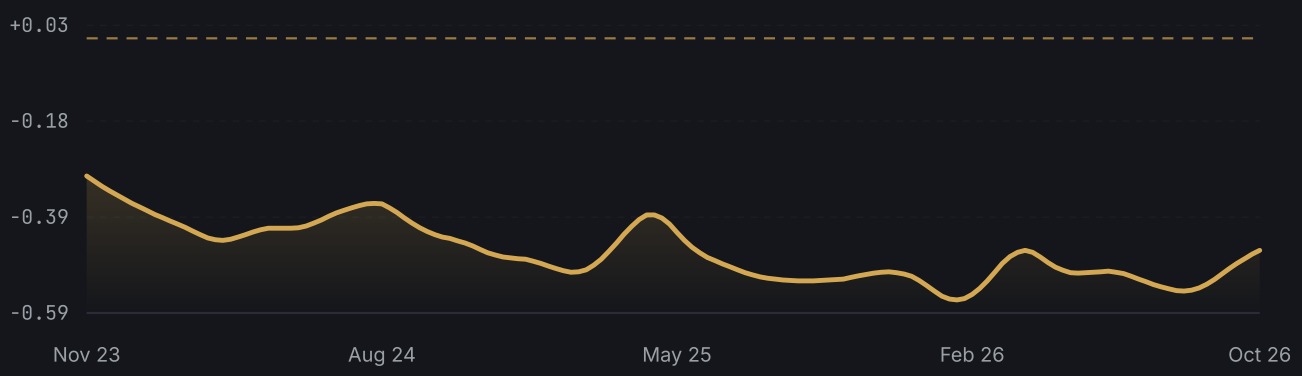

**What it means:** With headline inflation at 4.0, a November 10 CPI reading above the 0.3% threshold would raise the risk of near-term downside pressure on US Treasuries and risk assets.

## LIQUIDITY REGIME

### US Federal Reserve Net Liquidity (3-Year Weekly) · series date 2026-11-08

**Chicago Fed Financial Conditions Index — NFCI (3-Year Weekly)** · series date 2026-10-30 **-0.459 (+0.008 w/w)**

Above 0 = tighter-than-average conditions, below 0 = looser.

**What happened:** The Fed balance sheet stands at $6.75T, while NFCI is -0.459 with a one-week change of 0.008000000000000007.

**What it means:** As long as NFCI remains negative, financial conditions are supportive for risk assets, but the weekly deterioration of 0.008000000000000007 warrants near-term caution in equity and crypto positioning.

## WHAT MATTERS NEXT

| NEXT FOMC | MEDIAN DOT (2026) |
|---|---|
| **Wed** (31 days away) | 4.10% |

| DATE | TIME (TRT) | EVENT | COUNTRY | PREV | CONS | ACTUAL |
|---|---|---|---|---|---|---|
| 10 Nov Tue | 16:30 | Core CPI MoM | USD | 0.3% | 0.2% | |
| 10 Nov Tue | 16:30 | CPI MoM | USD | 0.6% | 0.3% | |
| 12 Nov Thu | 16:30 | Unemployment Claims | USD | 189K | 194K | |
| 13 Nov Fri | 16:30 | Core PPI MoM | USD | 0.7% | 0.3% | |
| 13 Nov Fri | 16:30 | PPI MoM | USD | 1.3% | 0.4% | |

**What happened:** The CPI MoM forecast for Tuesday, 10 Nov is 0.3% versus 0.6% previously, while the core CPI MoM forecast is 0.2%.

**What it means:** A CPI MoM print at or below 0.3% could support near-term upside risk appetite in US Treasuries and BTC, while an above-consensus result risks downside volatility in those assets.

## STABLECOIN SUPPLY & SHARE

**Total Stablecoin Market Cap & USDT/USDC Shares (3-Year Weekly)** · series date 2026-11-08

**What happened:** Total stablecoin supply fell to 292.361 on 2026-11-08 from 298.364 in the prior week.

**What it means:** The liquidity contraction pressures near-term risk appetite in BTC and altcoins; defensive positioning is favored until total supply moves back above 298.364.

## CONFLICTING SIGNALS

| BTC FUNDING RATE | | 25Δ RISK REVERSAL |
|---|---|---|
| +0.0085% | ⇆ | -4.49% |

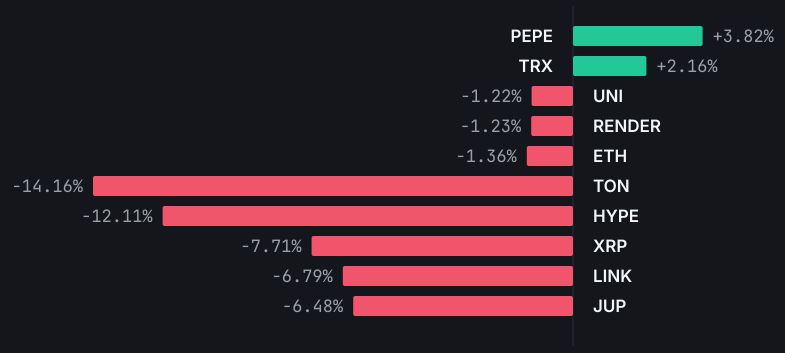

**Reading:** Perpetual funding measures levered directional positioning; the risk reversal measures demand for optional protection. Positive funding against a negative risk reversal is a market that is long and hedged at once — the two price different horizons.
