WEEKLY DEEP DIVE

Strategic Liquidity, Macro Themes & Crypto Rotation

Sun, Oct 18 2026

Data cut: 2026-10-18 21:34 TRT

WEEK IN ONE MINUTE

NEUTRAL NEUTRAL regime: Macro liquidity support has yet to overcome weak crypto flows and broad-based selling pressure.

The week is defined by a balance between improving global liquidity, persistent inflation, and negative ETF flows. BTC at 81050 remains above its long-term averages, but the drawdown from the peak, weak altcoin performance, and downside options hedging warrant caution. This mix favors selective, neutral positioning between support and resistance rather than a directional conviction.

THREE THEMES OF THE WEEK

THEME 1 · **LIQUIDITY SUPPORT**

Global liquidity increased 0.12 weekly and 0.13 monthly, providing macro support for risk assets. However, the 0.008000000000000007 weekly rise in NFCI shows that the impulse from financial conditions is not uniformly supportive.

THEME 2 · **INSTITUTIONAL OUTFLOWS**

Total BTC ETF flow of -228.4 million and total ETH ETF flow of -320.1 million indicate weak institutional demand. Negative flows are limiting the transmission of macro liquidity support into crypto.

THEME 3 · **BROADENING SELLOFF**

Losses across layer and thematic baskets are broad, with JUP's -26.2608 change highlighting fragility in rotation. BTC's more limited -3.2606 change points to defensive positioning.

US Inflation Path (CPI, Core CPI, Core PCE YoY — 5-Year) · series date 2026-08

What happened: In August 2026, core PCE was 3.01%, headline CPI was 3.69%, and the prior Michigan inflation-expectations reading was 4.7%.

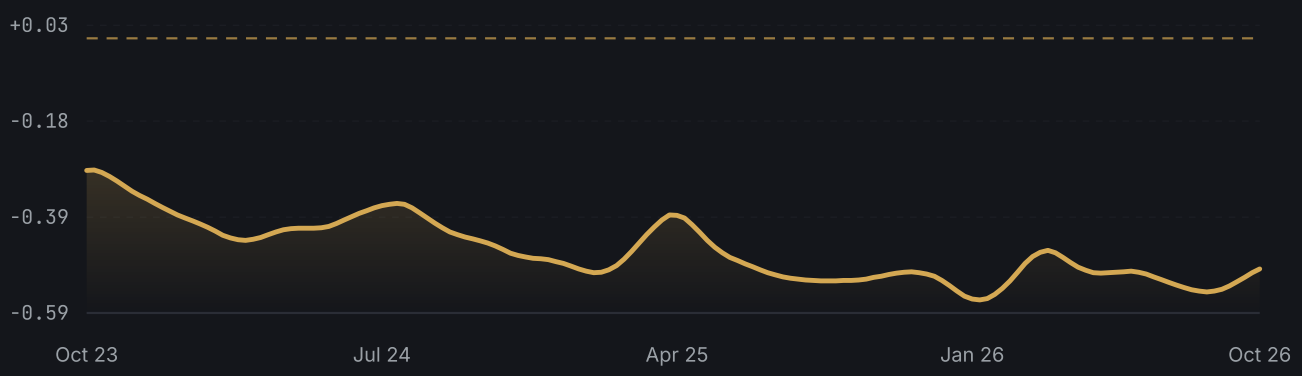

What it means: Core PCE remaining at 3.01% creates near-term downside risk for rate-sensitive assets and BTC with 10 days until the 2026-10-28 FOMC; cautious positioning is warranted until it falls sustainably below 3.01%.

LIQUIDITY REGIME

US Federal Reserve Net Liquidity (3-Year Weekly) · series date 2026-10-18

Chicago Fed Financial Conditions Index — NFCI (3-Year Weekly) · series date 2026-10-09 **-0.499 (+0.008 w/w)**

Above 0 = tighter-than-average conditions, below 0 = looser.

What happened: Global liquidity, tracked as the Fed balance sheet, stands at $6.76T; the weekly change is 0.12 and the monthly change is 0.13, while NFCI is -0.499.

What it means: As liquidity expansion continues, short-term upside positioning in risk assets—especially Bitcoin and growth equities—is supported; however, NFCI's 0.008 weekly increase indicates that easing in financial conditions is losing momentum.

23 Oct Fri	17:00	Revised UoM Inflation Expectations	USD	4.7%	N/A	

What happened: US initial jobless claims are forecast at 200K, while US flash manufacturing PMI is forecast at 55.5, services PMI at 58.0, consumer sentiment at 46.3, and prior inflation expectations at 4.7%; the FOMC is 10 days away.

What it means: Within the 10-day window to the FOMC, the near-term direction for BTC and high-beta equities will depend on whether US PMI and inflation-expectations data beat or miss these forecasts, so risk positioning should remain cautious until the data surprise is known.

What happened: BTC's 30-day correlation with the NDX rose to 0.66, while BTC's year-to-date return was -8.662506667286511 as of 2026-10-18 and the NDX return was 15.795263111036103 as of 2026-10-16.

What it means: In the short term, risk appetite and technology equities remain key for BTC; if the NDX turns lower, the 0.66 correlation threshold signals persistent downside risk for BTC.

What happened: In the latest week, total flows were -228.4M for BTC ETFs and -320.1M for ETH ETFs.

What it means: With ETH ETF outflows persisting, defensive short-term positioning in ETH is favored; a return to positive flows is the threshold to watch for risk appetite.

STABLECOIN SUPPLY & SHARE

Total Stablecoin Market Cap & USDT/USDC Shares (3-Year Weekly) · series date 2026-10-18

What happened: Total stablecoin supply declined to 304.594 on 18 October 2026, with USDT at 183.37 and USDC at 72.606.

What it means: While total supply remains below the 306.072 threshold, liquidity support for risk appetite in BTC and altcoins is likely to remain weak in the short term.

Reading: Perpetual funding measures levered directional positioning; the risk reversal measures demand for optional protection. Positive funding against a negative risk reversal is a market that is long and hedged at once — the two price different horizons.

What happened: All major themes declined in the sector rotation, with JUP posting the steepest loss at -26.2608, while TRX was the only notable asset in positive territory at 0.2995.

What it means: Risk appetite is weak; in the near term, BTC's relative resilience at -3.2606 supports defensive positioning in BTC over high-beta altcoins.

What happened: Bitcoin trades at 81050, above its 200-week moving average of 66835.226953125 and -35.03 below its peak of 124752.53125.

What it means: Medium-term Bitcoin positioning can be maintained while price holds above the 200-day average at 72490.5569140625; a break below that threshold would confirm a negative trend and warrant risk reduction.
