

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Wed, Sep 9 2026

NEUTRAL Markets remain in a neutral regime: crypto performance and the copper-to-gold ratio provide support, while higher volatility and bond yields temper risk appetite.

The market backdrop remains neutral. **VIX at 16.04** rose 2.04%, while **MOVE at 76.14** points to higher Treasury-market volatility; the US 10-year yield climbed to **4.806%**. Brent crude rose to **\$100.79**, putting Middle East supply risks back at the center of the inflation and growth outlook. Total crypto market capitalization fell to **\$2.68 trillion**, down 2.47% over 24 hours, although Bitcoin gained 2.8% over seven days and Ethereum rose 4.1%; the Fear & Greed Index remained in Greed at 66. US PPI releases tomorrow and CPI data on September 11 will be crucial for rate expectations, particularly as higher energy prices may reinforce inflation pressure; the next FOMC meeting is scheduled for September 16.

STRATEGIC RESEARCH FOCUS

COMMODITIES

Is the Hormuz traffic decline becoming a lasting supply shock?

Shipping through the Strait of Hormuz staying below its 10-day average while Brent rises above \$100 requires testing whether geopolitical risk is turning into a genuine physical supply disruption. Track whether traffic recovers, whether oil holds above the \$100 threshold, and whether the EIA's weekly inventory and supply data confirm tightening conditions.

PRIMARY SOURCES / REPORTS:

- **Reuters — Shipping traffic via Strait of Hormuz stays below 10-day average, data shows - Reuters** — Examine the level of vessel traffic through the strait versus the 10-day average and the scale of the decline.
- **EIA — Weekly Petroleum Status Report** — Check U.S. crude and product inventories, refinery utilization, and trade flows to test whether the price move is confirmed by physical supply tightening.
- **Reuters — Brent crude rises above \$100 a barrel as Middle East conflict intensifies - Reuters** — Compare the geopolitical supply-risk narrative with Brent's move through the \$100 threshold.

MACRO

How will the bond-market shock reshape Fed pricing ahead of PPI and CPI?

With the U.S. 10-year yield at 4.806% and MOVE at 76.14, the September 10 PPI and September 11 CPI releases will test whether inflation risk is being repriced. The key question is how pricing changes ahead of the September 16 FOMC if PPI exceeds the 0.4% headline and 0.3% core forecasts; monitor those data thresholds, the 10-year yield, and CME FedWatch probabilities.

PRIMARY SOURCES / REPORTS:

- **BLS — Consumer Price Index (CPI)** — Compare the September 11 headline and core monthly and annual CPI readings with forecasts, particularly the 0.4% headline monthly and 0.2% core monthly thresholds.
- **Federal Reserve — FOMC Calendar & Statements** — Review the September 16 FOMC statement and its guidance on inflation and the rate path.
- **CME FedWatch Tool** — Track changes in market-implied FOMC expectations before and after PPI and CPI, and compare them with the 2026 median dot projection.

CRYPTO

Is the crypto selloff a leverage unwind or weakening institutional demand?

Total crypto market capitalization fell 2.47% in 24 hours while BTC open interest rose 6.25%, the Coinbase premium slipped to -0.057, and spot ETF flows posted a \$46.6 million net outflow. The research question is whether the decline reflects an unwind of newly added leverage or continued weakness in U.S. demand; BTC support at \$77,698, resistance at \$80,670, funding rates, and ETF flows are the key signals.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Break down the \$46.6 million total net outflow on September 8 by fund and check whether demand recovers over subsequent sessions.
- **Coinglass — Derivatives Data** — Check the 6.25% increase in BTC open interest, the 0.007629% funding rate, and whether the decline is producing leveraged liquidations.
- **Coinbase Premium and market data** — Use BTC price and market-structure data to assess whether the Coinbase premium remaining at -0.057 coincides with persistent weakness in U.S. spot demand.

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: On September 8, IBIT recorded a \$10.7 million inflow while FBTC saw a \$17.1 million outflow, leaving total spot Bitcoin ETF flows negative by \$46.6 million. Positive inflows signal buying pressure and negative outflows signal selling pressure; the net outflow, alongside a Coinbase premium of -0.057%, suggests limited institutional demand.

TOP STORIES

REUTERS · 09:35

Shipping traffic via Strait of Hormuz stays below 10-day average, data shows - Reuters

AI Insight: Shipping traffic below the 10-day average through the Strait of Hormuz adds to uncertainty over energy supply. Brent at \$100.79, together with higher 10-year yields and upcoming PPI and CPI releases, brings inflation risk back into focus and supports a neutral regime.

REUTERS · 09:10

Brent crude rises above \$100 a barrel as Middle East conflict intensifies - Reuters

AI Insight: Brent moving above \$100 supports the energy sector but restrains broader risk appetite. Higher VIX and MOVE, positive BTC funding rates, and \$46.6 million of net ETF outflows indicate that investors are adding risk cautiously rather than committing to a broad risk-on move.

REUTERS · 08:44

Oil nears \$100 as fresh Middle East strikes raise supply risks - Reuters

AI Insight: Fresh Middle East strikes increase the risk of supply disruptions and add upside pressure to crude prices. Ahead of the September 11 CPI release, this could challenge rate-cut expectations; the decline in total crypto market capitalization and negative Coinbase premium reinforce the defensive tone.
