

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Fri, Sep 25 2026

RISK-ON A softer dollar and lower VIX, combined with strong crypto performance and ETF inflows, are supporting risk appetite.

The market backdrop supports a risk-on regime: VIX fell to **15.32**, DXY declined 0.25% to **101.04**, and Nasdaq 100 futures gained 0.53%. The US 10-year Treasury yield rose 4.80 basis points to **5.162%**, showing that rate sensitivity remains elevated despite the constructive risk tone. In crypto, BTC rose 1.83% in 24 hours to **\$84,703**, while ETH gained 2.92%, XRP 6.86%, and SOL 5.30%; total market capitalization stands at **\$2.88 trillion**, BTC dominance at 58.93%, and Fear & Greed at 71, or Greed. However, total crypto market capitalization slipped 0.73% over 24 hours, while the Coinbase premium at -0.029% indicates that strong US spot demand has not yet been fully confirmed. Today's calendar includes revised University of Michigan consumer sentiment and inflation expectations; with no CPI, PPI, PCE, or FOMC decision released this week, the key macro risks are elevated Treasury yields and the 4.1% median rate path ahead of the October 28 FOMC meeting.

STRATEGIC RESEARCH FOCUS

COMMODITIES

How much can a non-Hormuz supply risk disrupt oil pricing?

Houthi attacks on Saudi Arabia raise geopolitical supply risk, while hopes for a US-Iran truce are pushing oil lower. The research question is whether diplomatic expectations can continue to outweigh the risk of a physical supply disruption; the concrete signals are any impact on shipments and oil infrastructure, alongside weekly inventory and production data.

PRIMARY SOURCES / REPORTS:

- **Reuters — Allies unite behind Saudi Arabia as Houthis step up attacks - Reuters** — Examine the targets of the attacks, allied military and diplomatic responses, and direct risks to energy infrastructure.
- **Reuters — Oil slides as US-Iran truce hopes outweigh Houthi attacks on Saudi Arabia - Reuters** — Track how much the oil decline depends on truce expectations and how the market is pricing the geopolitical risk premium.
- **EIA — Weekly Petroleum Status Report** — Check crude and product inventories, refinery utilization, production, and import-export flows for evidence of a supply shock.

LIQUIDITY

Is crypto strength driven by real spot demand or leverage and liquidity?

Total crypto market capitalization declined over 24 hours even as Bitcoin ETFs recorded \$190.7 million and Ethereum ETFs \$66.1 million of inflows; Coinbase premium remains negative, BTC funding is negative, and Bitcoin open interest is rising. The research question is how much institutional spot demand offsets derivatives positioning and fragile liquidity; the key levels are the \$81,345.15 BTC support and \$86,056.83 resistance, together with the persistence of ETF inflows.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Check the distribution of the \$190.7 million total inflow on September 24 and whether flows persist in subsequent sessions.
- **Farside — Ethereum ETF Flows** — Examine the fund-level composition of the \$66.1 million total Ethereum inflow and the breadth of demand relative to Bitcoin.
- **Coinglass — Derivatives Data** — Monitor BTC and ETH funding rates and open-interest changes to test whether spot ETF demand is being reinforced by leverage.

---	------------------------	------------------------------	----------------------------------

Analyst Note: Combined stablecoin market capitalization reached \$259.17 billion, up 0.13% in 24 hours, indicating a modest expansion in available crypto liquidity. SMH fell 0.15%, while the copper/gold ratio rose 4.53%; despite slight semiconductor weakness, the commodity ratio supports a constructive growth and risk-appetite signal. The 2Y-10Y spread is unavailable, so the yield-curve signal cannot be assessed.

Reading Guide: Positive values indicate US institutional buying pressure. Sustained positive premium is a bullish signal for BTC.

FEAR & GREED

FUTURES TERM STRUCTURE & POSITIONING

NEUTRAL

BTC BASIS

ETH BASIS

—

—

BTC funding is mildly negative at -0.0043%, while ETH funding is positive at 0.0122%; this divergence suggests limited crowded long exposure in BTC but more visible long demand in ETH. Futures basis data is unavailable, so the premium direction cannot be confirmed; BTC open interest rising 2.97% over 24 hours warrants monitoring for leverage buildup.

+190.7M	+162.6M	+12.9M

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: Spot Bitcoin ETFs recorded total inflows of \$190.7 million on September 24, including \$162.6 million for IBIT and \$12.9 million for FBTC. Positive flows represent buying pressure and institutional demand; the broader inflow streak across the past nine sessions reinforces the risk-on signal, although the slower pace versus prior sessions should be monitored.
