

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Wed, Aug 12 2026

NEUTRAL Macro uncertainty and cautious crypto sentiment are balanced by selective risk appetite, keeping markets in a neutral regime.

Markets are showing a cautious tone ahead of US inflation data and amid geopolitical tensions. **VIX at 15.28** has eased, while the **DXY at 99.87** edged higher and the US 10-year Treasury yield stood at **4.684%**; the 2-year yield was **4.25%**, leaving the 2s10s spread at **0.434 percentage points**. Total crypto market capitalization fell 0.07% over 24 hours to **\$2.27T**, Bitcoin dominance remained at **56.27%**, and Fear & Greed stayed in **Fear at 27**. Bitcoin declined 0.3% while Ethereum gained 0.8%; Bitcoin ETFs recorded only a modest **\$7.8M** net inflow, while Ethereum ETFs saw a **\$1.7M** net outflow. Today's CPI is expected at 0.1% month over month and 3.4% year over year, with core CPI at 0.2% month over month and 2.5% year over year; tomorrow's PPI expectations will also be important for Fed pricing and risk assets.

STRATEGIC RESEARCH FOCUS

MACRO

The post-CPI rate path: what is the Treasury market pricing?

Today's CPI will test whether geopolitical energy pressure is altering the inflation outlook and Fed pricing. Focus on the deviation of core CPI from the 0.2% monthly forecast, the reaction in the 2-year yield at 4.25% and the 10-year yield at 4.684%, and any repricing in CME FedWatch expectations.

PRIMARY SOURCES / REPORTS:

- **BLS — Consumer Price Index (CPI)** — Review headline and core monthly and annual rates, energy components, and shelter services in the CPI release.
- **US Treasury — Daily Yield Curve Rates** — Compare the daily move in the 2-year and 10-year Treasury yields after CPI and assess the curve repricing.
- **CME FedWatch Tool** — Check meeting-by-meeting Fed rate probabilities before and after CPI and measure changes in the expected policy path.

COMMODITIES

Is US-Iran tension making the energy risk premium durable?

Doubts over a US-Iran deal and attacks in the Red Sea and Gulf of Oman require testing whether higher oil prices reflect a temporary headline premium or emerging physical supply and shipping risk. The concrete signal to track is whether EIA data on inventories, production, trade, and refinery utilization collectively point to tightening supply.

PRIMARY SOURCES / REPORTS:

- **EIA — Weekly Petroleum Status Report** — Review crude and product inventories, US production, imports and exports, refinery utilization, and product demand to test the physical basis of the price move.
- **Reuters — Oil rises as doubts over US-Iran deal heighten supply concerns - reuters.com** — Read how uncertainty around US-Iran talks is translating into oil risk through supply and transit channels.
- **Reuters — Four crew, two rescuers killed in Red Sea attack; US strikes ship in Gulf of Oman - reuters.com** — Separate the impact of Red Sea and Gulf of Oman incidents on shipping, insurance, and regional supply-chain risk.

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: A \$50.2M inflow into IBIT, a \$4.1M outflow from FBTC, and a total net inflow of \$7.8M indicate that institutional demand persists but remains limited. Positive flows signal buying pressure and negative flows signal selling pressure, so ETF data should be read alongside Bitcoin's 0.3% daily decline and the negative Coinbase premium.

TOP STORIES

REUTERS · 02:19

Oil, gold prices rise as geopolitical tensions mount before CPI - reuters.com

AI Insight: Gold rising 1.71% and Brent crude gaining 0.40% ahead of geopolitical developments point to safe-haven demand and supply-risk pricing. This defensive commodity move, combined with Fear & Greed at 27 and a Coinbase premium of -0.10%, does not provide a strong risk-on signal for crypto.

REUTERS · 01:20

Trump says his plane faced 'greater risk' in secret flight change - reuters.com

AI Insight: Trump's comments on flight security do not introduce a direct market data signal, but they add to the political and geopolitical uncertainty encouraging caution ahead of CPI. Limited ETF inflows and a negative Coinbase premium suggest investors are not responding to that uncertainty with aggressive buying.

REUTERS · 00:59

Oil rises as doubts over US-Iran deal heighten supply concerns - reuters.com

AI Insight: Doubts over a US-Iran deal are increasing concerns about oil supply, consistent with Brent's 12.36% seven-day gain. Higher energy prices could keep inflation expectations elevated ahead of CPI and PPI, limiting risk-asset valuations through still-high Treasury yields.
