NEUTRAL Markets seek cautious balance amid macro uncertainty and crypto fear index pressure.

As of July 31, 2026, markets are painting a complex picture in the shadow of a week packed with critical macro data. The **VIX** has eased to **16.87**, yet the Fear & Greed Index remains deep in 'Extreme Fear' territory at **25** — a divergence suggesting institutional buying is clashing with retail panic. The **10-year Treasury yield** holds elevated at **4.66%**, while the 2s10s spread turning positive at **44.3 bps** signals a continued normalization of the yield curve. The week's most pivotal event, the **FOMC rate decision**, was delivered Wednesday with rates held unchanged at **3.75%** as expected, and the Fed's cautious stance continues to fuel uncertainty in crypto markets. Thursday's **Core PCE** print (prior: 0.3%, forecast: 0.2%) and **Advance GDP** (prior: 2.0%, forecast: 2.1%) carried significant weight in shaping the Fed's policy path. On the crypto front, **BTC** trades at **\$63,856** with BTC dominance holding firm at **56.4%**, while total crypto market cap stands at **\$2.27 trillion**.

STRATEGIC RESEARCH FOCUS

COMMODITIES

Why Is Crude Oil Falling Despite Gulf Tensions?

Crude oil dropped more than \$1 despite the ongoing US-Iran war backdrop; simultaneously, a drone strike in Egypt raised security concerns over Suez export routes while Saudi Arabia announced a multinational maritime defense coalition. The paradox: geopolitical risk is rising yet prices are falling. This signals that supply flows are exceeding expectations and demand concerns are suppressing the risk premium. Key threshold to watch: EIA weekly crude inventory data — if stockbuilds continue, the supply-side narrative justifies the price decline; an unexpected draw would signal that the geopolitical risk premium could return.

PRIMARY SOURCES / REPORTS:

- **Reuters — Oil falls more than \$1 on greater flows despite US-Iran war** — Identify which geographies (especially Iran and non-Gulf producers) are driving the supply increase and confirm the magnitude of the price move.
- **Reuters — Drone strike in Egypt sparks security concerns about Suez oil exports** — Assess the daily oil volume transiting Suez and whether the strike has any operational impact on flows; determine if a route closure risk is credible.
- **EIA — Weekly Petroleum Status Report** — Check the latest weekly crude and refined product inventory changes; the direction of stockpiles is the primary evidence explaining why prices are falling despite geopolitical pressure.

MACRO

Post-FOMC 10-Year Yield Surges: What Is the Market Pricing In?

At the July 29 FOMC meeting, the Fed held rates steady at 3.75% as expected. Yet today the 10-year US Treasury yield climbed to 4.663% while the 2-year fell to 4.22%, widening the 2s10s spread to 44.3 basis points. This is a notable divergence: the short end prices the Fed's wait-and-see stance while the long end rises on inflation and debt sustainability concerns. The Advance GDP Price Index forecast of 4.1% (up from a prior 3.6%) and Core PCE pressure are feeding this dynamic. Key threshold to watch: a sustained close above 4.70% on the 10-year could trigger a fresh wave of pressure on risk assets.

PRIMARY SOURCES / REPORTS:

- **Federal Reserve — FOMC Calendar & Statements** — Read the July 29 FOMC statement; focus on the inflation assessment and any shift in tone around the 'data dependent' language.
- **US Treasury — Daily Yield Curve Rates** — Track the daily movement of 2-year and 10-year yields; monitor the pace of curve steepening and proximity to the 4.70% threshold.
- **BEA — PCE Price Index** — Check the actual Core PCE MoM reading released on July 30; a print above the 0.2% forecast would confirm why long-end yields are rising.

CRYPTO

Crypto Fear at Extremes, ETF Inflows Strong: How Long Can This Divergence Last?

The Fear & Greed Index sits at 25 in 'Extreme Fear' territory, yet Bitcoin spot ETFs recorded \$233.1 million in net inflows as of July 30 (IBIT alone: \$183.4 million). Meanwhile, the Coinbase premium has been persistently negative over the past week (around -0.12 today), meaning US retail buyers remain weak while institutional ETF demand is holding the market up. BTC funding rates have turned negative (-0.0038), signaling short position accumulation. The critical question: how sustainable is this divergence between institutional ETF buying and weak retail demand combined with negative funding? A break below the \$63,315 support level raises the risk of a squeeze.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Review daily and weekly net flows by fund; assess the sustainability of IBIT's dominant share and compare the direction of other ETFs.
- **Coinglass — Derivatives Data** — Check the BTC funding rate history and open interest trend; the combination of negative funding and rising OI measures the short squeeze potential.
- **Glassnode Insights** — Examine on-chain retail vs. institutional flows and HODLer behavior; compare current patterns with historical accumulation episodes during 'Extreme Fear' periods.

REUTERS · 03:00

Oil falls more than \$1 on greater flows despite US-Iran war - Reuters

AI Insight: Oil prices fell more than \$1 despite US-Iran tensions as greater supply flows weighed on the market, pulling Brent to \$87.80; the energy sector's (XLE: +0.53%) relative resilience is being tested, and the commodity channel continues to exert indirect pressure on broader crypto risk sentiment.

REUTERS · 21:43

US cyber defense agency warns hackers are increasingly targeting water systems - Reuters

AI Insight: The US cyber defense agency's warning about escalating attacks on water infrastructure highlights systemic risks to critical systems; such geopolitical cyber threats could accelerate institutional interest in decentralized infrastructure and blockchain-based security solutions.

REUTERS · 20:08

Drone strike in Egypt sparks security concerns about Suez oil exports - Reuters

AI Insight: A drone strike in Egypt triggering security concerns over Suez Canal oil exports underscores the ongoing fragility of the Middle East supply chain; despite current downward pressure on Brent prices, events of this nature keep acute volatility risk very much alive in energy markets.
