Global Macro & Crypto Market Intelligence

Mon, Aug 3 2026

RISK-OFF Geopolitical de-escalation eases oil pressure, but rising yields and ETF outflows keep crypto in risk-off territory.

Today's market narrative was dominated by **Trump's cancellation of a planned strike on Iran in favor of nuclear negotiations**, sending Brent crude down **6.6%** to **\$84.20** while gold firmed **1.6%** to **\$4,115**. On the macro front, the **10-year US Treasury yield climbed to 4.75%**, approaching recent highs, while VIX at **16.2** signals a moderately calm equity backdrop; the 2s10s spread continues to steepen at **51 basis points**. In crypto, the Fear & Greed index sits deep in **Fear territory at 28**, with BTC dominance holding elevated at **56.2%** and total crypto market cap near **\$2.23 trillion**. BTC trades at **\$62,386**, down **4.4%** over seven days, while the persistently negative Coinbase premium signals weak US retail demand. Looking ahead, this week's **Non-Farm Payrolls (Friday, forecast: 88K)** and **ISM Services PMI** will be pivotal for Fed rate expectations; with the dot plot median at **3.8%** and the next FOMC meeting **44 days away**, incoming data will heavily influence market positioning.

STRATEGIC RESEARCH FOCUS

Iran Deal Hopes Sink Oil: How Long Will the Refinery 'Golden Age' Last?

Trump's decision to cancel strikes on Iran and pursue nuclear negotiations sent oil prices sharply lower, while Reuters analysts warn that the refinery margin expansion seen during the conflict period is unlikely to persist. The rapid unwinding of geopolitical risk premium creates a significant divergence between crude producers and refiners, even as the Energy sector (XLE) gained about 1% today. Key signal to watch: EIA weekly crude inventory data — a larger-than-expected build would add further downward pressure on prices, while refiners maintaining cracking spreads could hold a relative advantage.

PRIMARY SOURCES / REPORTS:

- **Reuters — Iran War Ushers in Oil Refining Golden Era, It Won't Last** — Read the analysis on refinery margin expansion dynamics and post-conflict contraction risk; focus on cracking spread forecasts.
- **EIA — Weekly Petroleum Status Report** — Check crude and distillate inventory changes, refinery capacity utilization rates, and import/export balances; an inventory surprise will determine price direction.
- **Reuters — Oil Slumps on Hopes of Iran Deal** — Analyze how much geopolitical risk premium has been priced out by combining yen intervention and oil price movement from this news flow.

MACRO

10-Year Treasury at 4.74% in NFP Week: Can Labor Data Corner the Fed?

The US 10-year Treasury yield has risen to 4.74% (daily change +1.76%) and the 2s10s curve has widened to 51 basis points, while ADP employment data is due Wednesday and Non-Farm Payrolls (NFP) on Friday. The previous NFP came in at a weak 57K; the market consensus is 88K. A second consecutive weak print would intensify pressure for a Fed rate cut at the September meeting (44 days away), yet the elevated long-end yield continues to price in a 'stagflation' scenario. Key threshold: an NFP below 70K could pull bond yields lower; above 100K would reinforce the current high-rate environment.

PRIMARY SOURCES / REPORTS:

- **BLS — Employment Situation (NFP)** — On Friday August 7, evaluate the headline NFP number alongside average hourly earnings (0.3% forecast) and unemployment rate (4.2% forecast) together.
- **CME FedWatch Tool** — Track in real time how the probability of a rate cut at the September 2026 FOMC meeting shifts following the NFP release.
- **US Treasury — Daily Yield Curve Rates** — Compare 2-year (4.23%) and 10-year (4.74%) yields to monitor the pace and direction of curve steepening; the 60 basis point threshold is critical.

CRYPTO

\$265M Bitcoin ETF Outflow, Negative Coinbase Premium: Where Is US Retail Demand?

As of July 31, Bitcoin spot ETFs recorded total outflows of \$265.4M (IBIT -\$122.7M, FBTC -\$54.8M), while the Coinbase premium has remained persistently negative over the past week (current: -0.14). These two signals together indicate that US retail and institutional buyers are currently net sellers. The total crypto market cap fell 1.03%, with the Fear & Greed Index at 28 ('Fear'). The \$62,363 level is a critical support for BTC; a break below opens the door to \$62,275. Key signal to watch: Are Ethereum ETF flows staying positive (July 31: +\$9M), and is this divergence from BTC sustainable?

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — In the fund-level daily flow table, examine the persistence of IBIT and FBTC outflows and the cumulative trend of total negative flows.
- **Farside — Ethereum ETF Flows** — Check whether ETH ETFs are sustaining positive inflows; the flow divergence between BTC and ETH signals where risk appetite is rotating.
- **Coinglass — Derivatives Data** — Track BTC open interest levels and funding rates (BTC: 0.0005, ETH: 0.0032); the elevated ETH funding rate may signal short-term price pressure.

Iran war ushers in oil refining golden era. It won't last - Reuters

AI Insight: Reuters' analysis of an oil refining 'golden era' driven by the Iran conflict was quickly rendered moot by Trump's decision to cancel the strike; Brent's sharp decline underscores just how fragile and transient that refining margin windfall was.

REUTERS · 02:06

Index snub to test Indian bonds; rupee, RBI policy and US-Iran war in focus - Reuters

AI Insight: The 'index snub' test for Indian bonds arrives at a particularly difficult moment, with US-Iran tensions already keeping investors cautious; RBI policy uncertainty and rupee pressure add to emerging market risk premiums, creating headwinds for EM capital flows.

REUTERS · 01:03

Oil slumps on hopes of Iran deal, yen firms after intervention - Reuters

AI Insight: Hopes of an Iran deal sent oil sharply lower while yen strength following intervention confirms safe-haven demand remains alive; this combination is supportive for gold but offers no direct crypto catalyst given persistent ETF outflows and negative Coinbase premium.
