

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Mon, Sep 21 2026

RISK-ON The crypto rally, strong ETF inflows and copper outperforming gold confirm a clear risk-on backdrop.

Global risk appetite remains firm, with Nasdaq 100 futures up 2.15% and the VIX holding at a subdued 14.89. Total crypto market capitalization reached \$2.86 trillion, up 1.74% over 24 hours, while BTC rose 5.25% to \$84,491 and ETH gained 5.77%. A Fear & Greed reading of 70 in the Greed zone and broad-based altcoin gains reinforce the risk-on tone. BTC dominance remained at 59.05%, while combined stablecoin market capitalization increased to \$257.60 billion. Copper gained 2.49% and the copper/gold ratio rose 6.30%, strengthening the growth-sensitive signal, while Brent crude fell 7.12%, suggesting a retreat in the immediate geopolitical supply premium. There is no inflation release or Fed/FOMC decision scheduled this week; investors will focus on September 23 PMI data, September 24 jobless claims and September 25 University of Michigan inflation expectations.

STRATEGIC RESEARCH FOCUS

COMMODITIES

How fragile are oil flows through the Strait of Hormuz?

The thinning of vessel traffic through the Strait of Hormuz and the high cost of shuttle operations suggest that continued oil movement does not necessarily equal secure supply; Europe's Q4 jet-fuel deficit extends the risk into refined products. The concrete signals to monitor are persistently low transit volumes, a worsening jet-fuel supply gap, and logistics costs feeding into petroleum pricing.

PRIMARY SOURCES / REPORTS:

- **Reuters — COMMENTARY: Hormuz shuttles keep oil flowing, but at a high cost - Reuters** — Examine shuttle routes, freight and insurance costs, and the operational assumptions on which oil flows depend.
- **Reuters — Vessels trickle through Strait of Hormuz as Middle East conflict persists - Reuters** — Track vessel counts, waiting patterns, and the persistence risk for maritime transport created by the conflict.
- **EIA — Weekly Petroleum Status Report** — Compare U.S. crude and refined-product inventories, trade flows, and changes in jet-fuel supply.

POLICY

Will the Xi-Trump summit test China’s trade strength or its policy vulnerability?

China’s arrival at the summit with a strong trade engine makes the meeting more than a diplomatic event: it is a policy test for tariffs, export momentum, and global demand expectations. The key signal is whether the summit rhetoric reduces trade restrictions and retaliation risk, alongside evidence on the durability of China’s export engine and market sentiment.

PRIMARY SOURCES / REPORTS:

- **Reuters — Xi rolls into Trump summit with China's trade engine roaring - Reuters** — Examine the composition of China’s trade performance, its negotiating leverage before the summit, and potential tariff or export-control issues.
- **IMF — World Economic Outlook** — Compare China and global assumptions for trade, growth, and external demand, focusing on sensitivity to policy shocks.
- **ISM — Report on Business (PMI)** — Track export orders, supply-chain conditions, and price components in U.S. manufacturing and services surveys to gauge transmission into corporate activity.

CRYPTO

Is the crypto rally being carried by ETF demand or leverage and liquidity?

Crypto total market capitalization rose 1.74% over 24 hours, with \$433.0 million entering Bitcoin ETFs and \$143.7 million entering Ethereum ETFs; yet the Coinbase premium fell to -0.1126, Bitcoin funding is positive, and sentiment is in Greed territory. The research question is whether spot demand is genuinely supporting the rally; Bitcoin’s 79,762.575 support and 84,928.525 resistance should be monitored alongside funding and ETF flows.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Check whether aggregate and fund-level daily Bitcoin ETF inflows persist and whether the \$433.0 million flow is durable.
- **Farside — Ethereum ETF Flows** — Assess whether Ethereum ETF demand continues to accompany the strong \$143.7 million aggregate inflow.
- **Coinglass — Derivatives Data** — Use Bitcoin and Ethereum funding rates, open interest, and liquidation data to test whether leverage is driving the rally.

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: On September 18, IBIT received \$108.4 million, FBTC received \$310.7 million and total spot Bitcoin ETF inflows reached \$433.0 million; positive flows indicate buying pressure in the spot market. The FBTC-led inflow signals institutional support for the BTC advance, while negative flows would normally be interpreted as selling pressure.

TOP STORIES

REUTERS · 07:32

Xi rolls into Trump summit with China's trade engine roaring - Reuters

AI Insight: Xi entering the Trump summit with strong Chinese trade momentum could improve global growth and trade expectations; the 6.30% rise in the copper/gold ratio reinforces that growth-sensitive message. However, the 0.08% rise in DXY and Coinbase premium at -0.113% show that U.S. spot demand has not fully confirmed the rally.

REUTERS · 06:38

Europe faces Q4 jet fuel supply deficit even as South Korea becomes latest big supplier - Reuters

AI Insight: The risk of a fourth-quarter jet-fuel deficit in Europe could keep energy-related inflation pressure elevated. Brent's 7.12% decline offers short-term relief, but the report shows that geopolitical and logistical risks in the oil market have not disappeared.

REUTERS · 06:36

Trafigura launches Volare tanker arm, plans Oslo listing - Reuters

AI Insight: Trafigura's launch of the Volare tanker arm and planned Oslo listing highlight rising capital and capacity needs in energy transportation. Strong ETF inflows and a low VIX support the risk-on backdrop, but the investment plan also points to persistent structural uncertainty in supply chains.
