

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Mon, Aug 31 2026

RISK-ON Risk appetite remains supported by Bitcoin's strong monthly performance, a firmer copper-to-gold ratio and Greed-level sentiment.

The global backdrop retains a **RISK_ON** bias despite several vulnerabilities. VIX remains relatively low at **15.24**, although its 5.61% daily rise calls for caution, while a 0.19% decline in DXY supports risk assets. Bitcoin trades at **USD 78,330** and is up 24.8% over 30 days, yet total crypto market capitalization fell 2.59% over 24 hours to **USD 2.63 trillion**; BTC dominance is 59.69% and Fear & Greed is 62, or Greed. Nasdaq 100 futures slipped 0.12%, while technology fell 1.55% and SMH dropped 3.47%, showing that risk appetite is uneven across markets; in contrast, a 4.36% rise in the copper-to-gold ratio points to firmer cyclical-demand expectations. This week brings German preliminary CPI, the euro-area flash CPI estimate, US ISM, JOLTS, ADP and nonfarm payrolls; the next FOMC meeting is on 16 September, with the 2026 median policy-rate level shown at 3.8%.

STRATEGIC RESEARCH FOCUS

COMMODITIES

Could the Kharg tension become an oil shock?

Iranian statements about the Kharg energy hub put the transmission from geopolitical risk to physical oil supply and European equities back in focus. The research question is whether the episode creates a lasting supply disruption or only a temporary risk premium; key signals are EIA weekly inventory, production and trade data alongside energy-sector market performance.

PRIMARY SOURCES / REPORTS:

- **Reuters — Iran dismisses Trump's post of attack on key energy hub of Kharg - Reuters** — The status of Kharg facilities, confirmation or denial of the reported attack, and potential supply impact.
- **EIA — Weekly Petroleum Status Report** — Physical evidence of a geopolitical shock in crude inventories, refinery utilization, production, imports, exports and product stocks.
- **Reuters — Europe stocks edge lower as oil jumps; monthly gain in sight - Reuters** — The initial market transmission from higher oil prices into European indexes and sectors.

MACRO

Will September labor and PMI data reset Fed pricing?

The U.S. calendar from September 1–4 delivers a concentrated sequence of signals on the growth-labor balance through ISM manufacturing and services PMIs, JOLTS, ADP and payrolls; previous and forecast readings include 55.6 versus 55.2 for manufacturing PMI, 7.36M versus 7.33M for JOLTS, and -23K versus 58K for payrolls. The research question is how the data alter the 3.8 2026 median rate path and risk appetite ahead of the September 16 FOMC; focus on upside or downside surprises in payrolls, wages and the PMI mix.

PRIMARY SOURCES / REPORTS:

- **ISM — Report on Business (PMI)** — The September 1 and 3 manufacturing and services PMI readings, especially employment, new orders and prices subindexes.
- **BLS — Employment Situation (NFP)** — The September 4 payrolls, unemployment rate and average hourly earnings composition versus expectations.
- **Federal Reserve — FOMC Calendar & Statements** — The official September 16 FOMC schedule, decision and statement language to compare with the current 3.8 pricing.

CRYPTO

What do ETF divergence and leverage fragility reveal in crypto?

Bitcoin ETFs recorded total outflows of \$201.9 million on August 28 and the Coinbase premium fell to -0.0502, while Ethereum ETFs attracted \$102.1 million, raising the question of internal capital rotation. The research question is whether this divergence reflects durable spot demand or temporary leverage-driven positioning; monitor continued ETF flows, BTC's 77,629 support and 79,924 resistance, and SOL's 0.6648 funding rate.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — The fund-level breakdown of the August 28 total outflow of \$201.9 million and whether flows reverse in subsequent sessions.
- **Farside — Ethereum ETF Flows** — The allocation and persistence of the \$102.1 million total inflow between ETHA and FETH.
- **Coinglass — Derivatives Data** — Open interest, funding and liquidation data for BTC, ETH and SOL, with emphasis on whether SOL's 0.6648 funding rate signals an extreme.

Analyst Note: The Fed balance sheet contracted 0.22% weekly and 0.11% monthly, while combined stablecoin market capitalization declined 0.12% over 24 hours, leaving liquidity support limited. The 2Y-10Y spread is unavailable, and SMH's 3.47% decline signals near-term weakness in growth and semiconductor risk appetite; the 4.36% rise in the copper-to-gold ratio provides a more constructive cyclical signal.

BTC BASIS ETH BASIS

—

—

BTC and ETH funding rates are moderately positive at 0.0247% and 0.0199%, respectively, while SOL funding at 0.6648% indicates heavier long leverage. Futures-basis data is unavailable, so the alignment between futures premiums and spot demand cannot be confirmed; SOL funding raises the risk of a short-term squeeze or deleveraging.

OUTFLOW

TOTAL FLOW	IBIT (BLACKROCK)	FBTC (FIDELITY)
-201.9M	-33.4M	+0.0M

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: On 28 August, IBIT recorded a USD 33.4 million outflow, FBTC was flat, and total spot Bitcoin ETF flows were negative USD 201.9 million, indicating selling pressure in that session. Positive flows represent buying pressure and negative flows represent selling pressure; a single-day outflow does not by itself prove that the preceding strong inflow trend has permanently reversed.

TOP STORIES

CNBC · 11:00

Santoli: Why investors should be on high alert heading into September

Investors should be on high alert because various key market metrics are coiling near consequential thresholds.

AI Insight: Santoli's warning about indicators approaching consequential thresholds is relevant despite low VIX and Greed-level sentiment at 62; BTC's -0.0502% Coinbase premium and the USD 201.9 million total ETF outflow suggest that the rally still lacks full confirmation from institutional spot demand.

REUTERS · 10:09

Iran dismisses Trump's post of attack on key energy hub of Kharg - Reuters

AI Insight: Iran's dismissal of the reported attack post concerning the Kharg energy hub keeps uncertainty around energy supply and the geopolitical risk premium elevated. Brent crude was at USD 88.72, down 0.66% on the day, while the 5.61% rise in VIX shows how headlines can still generate volatility within a risk-on regime.

REUTERS · 08:30

Europe stocks edge lower as oil jumps; monthly gain in sight - Reuters

AI Insight: The decline in European equities as oil moved higher highlights how energy costs can cap regional risk appetite. Nevertheless, the 4.36% rise in the copper-to-gold ratio and the 0.19% DXY decline provide a macro backdrop that is not uniformly negative for global risk assets.
