

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Fri, Aug 7 2026

NEUTRAL Gold and commodity rally reflect geopolitical tensions while crypto holds cautiously ahead of NFP data.

Markets are navigating a careful balance today ahead of the **US Non-Farm Payrolls (NFP)** release. **VIX eased to 15.15** while the **10Y Treasury yield climbed to 4.67%**, suggesting markets are pricing in a stronger-than-expected jobs print. The **DXY** holds near **99.95**, barely changed, while gold surged to **\$4,352** — on track for its best week since January — and silver jumped **4.1%** on the day. On the crypto front, **BTC** trades sideways around **\$64,258** with the **Fear & Greed Index at 29** ('Fear') and total crypto market cap at approximately **\$2.28T**. **BTC Dominance stands at 56.6%** as most altcoins posted losses over the past 24 hours. Dwindling vessel traffic through the Strait of Hormuz and ongoing Iran-Oman negotiations are adding uncertainty to energy markets, with Brent crude rising **1.4%** to **\$83.61**. Overall, the market direction remains ambiguous ahead of NFP, with geopolitical risk continuing to be the primary driver on the commodities side.

STRATEGIC RESEARCH FOCUS

MACRO

NFP Day: 10-Year Yield at 4.67% — Which Scenario Is the Market Pricing In?

Today's (Aug 7) Non-Farm Payrolls release is expected at 85K after the previous 57K print; Average Hourly Earnings and the Unemployment Rate are also due. The 10-year Treasury yield surging to 4.67% (+1.15% daily) and the 2s10s spread widening to 49 bps signal the market is beginning to re-price stagflation risk. The key threshold to watch: if NFP comes in below 85K, will rate-cut expectations for the September FOMC (40 days away) strengthen, or will the 10-year yield push even higher from its current 4.67% level?

PRIMARY SOURCES / REPORTS:

- **BLS — Employment Situation (NFP)** — Report due at 15:30 today: focus on the NFP headline, Average Hourly Earnings MoM (0.3% forecast), Unemployment Rate (4.2% forecast) — pay close attention to prior-month revisions.
- **CME FedWatch Tool** — Track in real time how the probability of a September 2026 FOMC rate cut shifts immediately after the NFP print.
- **US Treasury — Daily Yield Curve Rates** — Monitor how the 49-bps spread between the 2-year (4.18%) and 10-year (4.67%) moves post-data; a break above 60 bps could be a critical signal.

COMMODITIES

Hormuz Risk and Gold's Best Week Since January: Genuine Safe-Haven Buying or Speculative Positioning?

Vessel traffic through the Strait of Hormuz has dwindled noticeably this week as Iran-Oman talks continue, with oil prices rising on concerns about reopening plans. Simultaneously, gold is on track for its best weekly performance since January 2026. The Copper/Gold ratio falling -2.48% on the week signals deteriorating global growth expectations. The critical question: does gold's rally reflect a genuine geopolitical risk premium, or is it temporary positioning tied to pre-NFP dollar weakness? The EIA weekly petroleum report and the trajectory of Hormuz negotiations must be monitored together.

PRIMARY SOURCES / REPORTS:

- **EIA — Weekly Petroleum Status Report** — Review crude oil and refined product inventory changes; verify whether the drop in Hormuz traffic is showing up in crude import figures on the supply side.
- **Reuters — Oil rises on concerns over Strait of Hormuz reopening plans** — Read the market interpretation of Hormuz reopening plans and their impact on oil prices; note any concrete vessel traffic figures mentioned in the article.
- **Reuters — Gold heads for best week since January, US jobs data in focus** — Examine the price levels and analyst commentary cited in the article to determine whether gold's weekly gain is geopolitical or dollar-driven in nature.

CRYPTO

ETF Inflows Continue While Coinbase Premium Stays Negative: Where Is the Spot Demand?

As of August 6, Bitcoin ETFs saw \$137.6M in inflows and Ethereum ETFs \$92.1M, both classified as 'Moderate Inflow.' Yet the Coinbase premium has remained persistently negative over the past week (ranging from -0.07 to -0.14), indicating that institutional ETF buying has not translated into US retail spot demand. Combined with a Fear & Greed index reading of 29 (Fear) and a 'Bearish' trend on BTC's 4-hour chart, the critical question is: are ETF inflows genuine accumulation or mechanical arbitrage-driven flows? A Coinbase premium turning positive and BTC breaking the \$64,658 resistance level would be a strong recovery signal.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Review daily flow history across all Bitcoin ETFs, led by IBIT (\$128.3M) and FBTC (\$11.2M); check the direction and consistency of cumulative flows over the past 5 trading days.
- **Farside — Ethereum ETF Flows** — Examine the correlation between ETHA-led (\$81.1M) Ethereum ETF flows and BTC flows; question the sustainability of ETH ETF inflows given ETH dominance holding at 10.08%.
- **Glassnode Insights** — With the Coinbase premium persistently negative, analyze on-chain accumulation address trends and long-term holder behavior to document the divergence between ETF inflows and on-chain accumulation.

--	-------------------------------	------------------------------------

Analyst Note: The 2Y-10Y yield spread at 49 basis points remains in positive territory, signaling continued curve normalization and diminishing recession fears. The combined stablecoin market cap of \$255.2B represents significant dry powder available for a potential crypto rotation. The SMH semiconductor ETF's 0.31% daily gain to \$571.48 underscores resilience in AI-sensitive technology, consistent with reports of robust AI-driven demand.

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: Spot Bitcoin ETFs recorded a combined inflow of \$137.6M on August 6th, with IBIT attracting \$128.3M and FBTC adding \$11.2M — marking the fourth consecutive day of positive flows. While sustained inflows signal ongoing institutional buying pressure, the moderation from the week’s peak of \$244.4M on August 5th suggests some deceleration in momentum.

TOP STORIES

REUTERS · 04:53

AI demand keeps China's export engine humming - Reuters

AI Insight: AI demand sustaining China's export engine aligns with SMH's 0.31% daily gain, confirming that global semiconductor supply chains remain robust; this creates a structural demand floor for AI hardware names like NVIDIA, which has gained over 12% in the past seven days.

REUTERS · 04:33

Vessel traffic through Hormuz dwindles this week as markets watch Iran-Oman talks - Reuters

AI Insight: The notable decline in vessel traffic through the Strait of Hormuz this week introduces serious supply-side uncertainty for global oil markets; Brent's rise to \$83.61 and Energy (XLE) leading S&P 500 sectors with a 1.48% gain directly reflect this geopolitical risk premium being priced in.

REUTERS · 02:05

Dollar drifts higher as traders eye Iran talks ahead of US jobs data - Reuters

AI Insight: The dollar's slight drift higher to 99.95 ahead of both the Iran talks and NFP data signals a mild flight-to-safety bias among traders; however, DXY remaining below the 100 handle limits downside pressure on dollar alternatives like BTC and gold.
