

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Fri, Sep 11 2026

RISK-ON Risk appetite remains supported by a lower VIX, firmer Nasdaq futures and a constructive copper-to-gold signal.

Global markets remain in a risk-on regime, supported by the **VIX falling to 17.22** and Nasdaq 100 futures gaining 0.60%. The DXY was broadly stable at 99.14, while the US 10-year Treasury yield rose to 4.94%, keeping rate sensitivity elevated ahead of today's inflation data. US CPI expectations point to a 0.4% monthly headline increase, a 0.2% core increase and 3.4% annual headline inflation; the outcome could influence pricing ahead of the Fed's 16 September FOMC meeting. Total crypto market capitalization fell 3.84% over 24 hours to \$2.64 trillion, while Bitcoin dominance held at 58.46% and Fear & Greed remained in Greed territory at 56. BTC is still up 20.9% over 30 days and ETH 30.7%, but daily weakness, negative ETF flows and a negative Coinbase premium argue for near-term caution.

STRATEGIC RESEARCH FOCUS

MACRO

Will CPI and oil pressure push Treasury yields higher?

Today's CPI will test how inflation data, the latest PPI readings, and oil-related price pressure alter Fed pricing. The key signals are whether headline CPI exceeds the 0.4% monthly forecast or core CPI exceeds the 0.2% forecast, and whether the 10-year yield moves materially above 4.943999767% ahead of the September 16 FOMC meeting.

PRIMARY SOURCES / REPORTS:

- **BLS — Consumer Price Index (CPI)** — Check headline and core monthly/yearly CPI results against the 0.4% headline and 0.2% core forecasts.
- **US Treasury — Daily Yield Curve Rates** — Track the 10-year Treasury yield after CPI against the 4.943999767% level and monitor the full curve.
- **CME FedWatch Tool** — Monitor how the CPI release changes rate pricing before the September 16 FOMC meeting.

COMMODITIES

Is the Hormuz traffic collapse becoming a durable supply shock?

The fall in Strait of Hormuz traffic to single digits, alongside security developments near Bab el-Mandeb, requires distinguishing a temporary risk premium from a physical oil-supply disruption. The concrete signals are whether shipping traffic recovers and whether weekly inventories, imports/exports, and refinery utilization simultaneously show tightening supply conditions.

PRIMARY SOURCES / REPORTS:

- **EIA — Weekly Petroleum Status Report** — Review crude and product inventories, production, imports/exports, and refinery utilization for evidence that Hormuz risk is reaching physical markets.
- **Reuters — Hormuz shipping traffic falls to single digits, data shows - Reuters** — Track whether daily vessel passages through Hormuz remain in single digits and examine the reported data methodology.
- **Reuters — Iran-backed Houthis reach Yemen's Dhubab on Bab el-Mandeb Strait, sources say - Reuters** — Assess how security developments near Bab el-Mandeb affect Red Sea transit and energy-shipping risks.

CRYPTO

Is the crypto selloff driven by leverage or institutional outflows?

The 3.8418723668311614% 24-hour decline in total crypto market capitalization, combined with total Bitcoin and Ethereum ETF outflows of \$282.7 million and \$29.9 million and sharp open-interest declines, raises the question of what kind of selling is taking place. Investigate whether ETF outflows persist and whether negative BTC funding and a Coinbase premium of -0.05450273876587477 indicate another leverage unwind; BTC support at 76754.28 and resistance at 79233.795 are the key thresholds.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Check whether the \$282.7 million Bitcoin ETF outflow is a one-day event or part of a continuing institutional selling sequence.
- **Farside — Ethereum ETF Flows** — Examine whether the \$29.9 million Ethereum ETF outflow is occurring alongside Bitcoin flows and signals broader risk reduction.
- **Coinglass — Derivatives Data** — Track the 13.394721955% BTC open-interest decline, the 8.651084606% ETH decline, funding rates, and liquidations around BTC support at 76754.28 and resistance at 79233.795.

TOP STORIES

CNBC · 08:35

Treasury yields steady as traders await consumer inflation data amid oil price pressure

Treasurys steadied Friday after surging to multiyear highs, as investors await more economic data.

AI Insight: Treasury yields rising to 4.94% while holding steady ahead of CPI shows that markets remain sensitive to an inflation surprise; however, the lower VIX and 0.60% gain in Nasdaq futures preserve the risk-on framework.

REUTERS · 08:21

Iran-backed Houthis reach Yemen's Dhubab on Bab el-Mandeb Strait, sources say - Reuters

AI Insight: The Houthis reaching Bab el-Mandeb could increase the risk premium on energy and shipping. Brent's 17.05% 30-day gain creates upside inflation risk for CPI expectations and Treasury yields, while BTC's negative Coinbase premium reflects cautious near-term spot demand.

REUTERS · 06:03

UK economy grows by most since early 2025 on possible AI boost - Reuters

AI Insight: The UK's strongest growth since early 2025, potentially supported by AI, could reinforce global growth expectations. The 2.44% decline in SMH, however, shows that technology and AI exposure is being priced selectively.
