Global Macro & Crypto Market Intelligence

Sun, Jul 26 2026

RISK-OFF Geopolitical escalation, ETF outflows and deepening fear sentiment reinforce a risk-off market regime.

As of July 26, 2026, global markets are operating in a pronounced risk-aversion environment as Iran's war spreads to the Red Sea and the Caspian Sea. **BTC** holds at **\$64,314** but remains in negative territory over the past seven days at **-0.5%**, while the Fear & Greed Index sits deep in fear territory at **26**. On the macro front, the **US 10-Year Treasury Yield** remains elevated at **4.679%**, VIX stands at **18.58**, and DXY holds relatively firm at **101.47**. The most critical calendar event this week is the **FOMC rate decision on Wednesday, July 29**, with markets pricing in a hold at **3.75%**. Thursday's **Core PCE** (forecast: **0.1% MoM**) and **Advance GDP** (forecast: **2.3% QoQ**) prints will directly shape the Fed's forward guidance. Two consecutive days of spot BTC ETF outflows and broad weakness across Magnificent 7 equities signal deteriorating institutional risk appetite.

STRATEGIC RESEARCH FOCUS

MACRO

FOMC in 3 Days: What Are Yield Curve and Market Pricing Signaling Ahead of the Fed Decision?

The Fed is expected to hold rates at 3.75% at the July 29 FOMC meeting. However, with the 10-year Treasury yield at 4.68% and the 2-year at 4.37%, the 2s10s spread has widened to 30.9 bps. This positive slope may signal that markets are revising their terminal rate expectations higher. The critical signal to watch: how Powell frames the July 30 Core PCE print (forecast: +0.1% MoM) and the Advance GDP release (forecast: +2.3% annualized) during his press conference.

PRIMARY SOURCES / REPORTS:

- **CME FedWatch Tool** — Check the probability distribution priced in for the July 29 FOMC meeting and cut expectations for September/November meetings.
- **Federal Reserve — FOMC Calendar & Statements** — Monitor the July 29 FOMC statement and subsequent press conference transcript; focus on language shifts around inflation and labor market assessments.
- **US Treasury — Daily Yield Curve Rates** — Track daily moves in the 2-year (4.37%) and 10-year (4.68%) yields; post-FOMC steepening or flattening will reveal how markets revise their rate path expectations.

CRYPTO

Bitcoin ETF Outflows Continue: Coinbase Premium Negative, Fear Index at 26 — Where Is the Floor?

As of July 24 data, Bitcoin spot ETFs saw a total outflow of \$240.1M (IBIT: -\$212.2M, FBTC: -\$27.9M), while Ethereum ETFs shed \$70.7M. The Coinbase premium has been persistently negative for weeks (current: -0.085), BTC's 4-hour technical trend is 'Bearish', and support sits at \$63,730. The Fear & Greed Index stands at 26, in 'Fear' territory. The key research question: are these outflows a short-term position flush or a structural break in institutional demand? SOL's funding rate at 0.0166 — far above BTC's 0.0052 — signals a notable divergence worth investigating.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Review the daily flow series by fund; determine how many consecutive days IBIT and FBTC have seen outflows and compare price behavior during similar prior outflow episodes.
- **Coinglass — Derivatives Data** — Monitor BTC open interest (\$136.8M) and funding rate (0.0052%); assess short-squeeze or long-liquidation risk in conjunction with the negative Coinbase premium.
- **Glassnode Insights** — Examine on-chain long-term and short-term holder cost bases; verify whether the \$63,730 support level has meaningful on-chain backing.

POLICY

Iran Conflict Spreads to Red Sea and Caspian: How Should Energy Corridors and Risk Premium Be Priced?

According to Reuters, the conflict linked to Iran has extended beyond the Red Sea to the Caspian, with Ukraine reportedly attacking an Iranian vessel and killing a sailor. Iran's Revolutionary Guards have threatened to target the UK if it supports the US. The US decision to forgo strikes in the Gulf is reshaping the conflict's geography. Caspian energy corridors (Kazakhstan and Azerbaijan crude export routes) and global trade volumes through the Red Sea are now at risk. Key signal to watch: EIA weekly petroleum report and Gulf transit volumes.

PRIMARY SOURCES / REPORTS:

- **Reuters — Iran war spreads to Red Sea and Caspian, Gulf quiet as US forgoes strikes** — Read as primary source for the geographic spread of the conflict and the shift in US posture in the Gulf; identify which maritime corridors are now at risk.
- **Reuters — Iran says Ukrainian attack on vessel in Caspian Sea killed sailor** — Examine the details of the Caspian attack; assess potential impact on Kazakhstan and Azerbaijan crude export routes.
- **EIA — Weekly Petroleum Status Report** — Check whether Red Sea and Caspian disruptions are showing up in US crude and refined product inventory data; monitor changes in import and export volumes.

CRYPTO DESK

TOTAL MARKET CAP \$2.29T ▲ +0.73%	BTC DOMINANCE 56.4%	24H TOTAL VOLUME \$38.8B
--	-------------------------------	------------------------------------

Analyst Note: The 2Y-10Y spread at +30.9 bps confirms the yield curve continues to normalize. The semiconductor ETF SMH's sharp decline of -3.27% underscores the pressure on the tech sector, while a modest rise in the Copper/Gold ratio (+0.75%) suggests only a marginal uptick in growth expectations.

DERIVATIVES DESK

\$64,314 ▲ +0.60%	Support Level \$63,730	Resistance Level \$65,658
Price at \$64,314 is holding above support (\$63,730), with resistance at \$65,658.

— —

BTC funding rates remain positive at 0.0052% and SOL at 0.0166%, indicating net long positioning in perpetual futures markets; however, in a heightened geopolitical uncertainty environment, these premiums can compress rapidly. The persistently negative Coinbase premium (-0.085) confirms that US retail buyers are not driving the current price action.

TOP STORIES

REUTERS · 23:18

Iran war spreads to Red Sea and Caspian, Gulf quiet as US forgoes strikes - Reuters

AI Insight: The expansion of Iran's war to the Red Sea and Caspian Sea sharply elevates risk perception around global energy corridors; Brent crude's +31.2% surge over the past 30 days is a concrete reflection of this threat being priced in. This backdrop supports demand for traditional safe-haven assets such as gold (\$4,070) and Treasuries, while creating near-term headwinds for BTC.

REUTERS · 21:10

Iran says Ukrainian attack on vessel in Caspian Sea killed sailor - Reuters

AI Insight: Ukraine's reported strike on an Iranian vessel in the Caspian Sea signals a broadening of the conflict in both geography and participating actors, introducing additional volatility risk to energy markets. The deepening geopolitical tension is compounded by SMH's sharp selloff and Nasdaq 100 futures declining -1.18%, reinforcing broad pressure on risk assets.

REUTERS · 20:21

Britain would be target if it supports US in war, Iran's Revolutionary Guards say - Reuters

AI Insight: Iran's Revolutionary Guards designating Britain as a potential target raises the prospect of the conflict escalating to directly involve NATO allies. This development deepens the macro uncertainty that is keeping VIX elevated at 18.58 and sustaining the ETF outflow streak observed over the past two sessions.
