

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Wed, Sep 2 2026

NEUTRAL Market signals are balancing each other, with risk appetite and defensive positioning producing a neutral backdrop.

On the macro side, **VIX at 16.79** rose 2.75%, while the **DXY at 99.81** gained 0.14% and the U.S. 10-year Treasury yield increased 3.80% to **4.796%**. Nasdaq 100 futures fell 0.59% and SMH declined 2.05%, pointing to pressure across technology and semiconductor exposures. Total crypto market capitalization fell 3.41% over 24 hours to **\$2.59 trillion**, while BTC dominance remained at 59.07% and the Fear & Greed Index stayed in Greed at 63. BTC declined 1.62% and ETH 3.15%, while UNI gained 7.85%, highlighting significant internal dispersion. This week, markets will monitor today's ADP employment data, jobless claims and ISM Services PMI on September 3, and nonfarm payrolls, wage growth and unemployment on September 4; the next FOMC meeting is scheduled for September 16, with the Fed's 2026 median rate projection at 3.8%.

STRATEGIC RESEARCH FOCUS

CRYPTO

Is the AI-token collapse part of the same deleveraging story as weaker Bitcoin demand?

Fresh lows in AI-token prices coincide with a 3.41% 24-hour decline in total crypto market capitalization, \$236.5 million of Bitcoin ETF outflows and a Coinbase premium of -0.0545, pointing to weaker risk appetite. The key thresholds are Bitcoin's 76,562 support and 79,091 resistance, whether ETF flows turn positive, and whether the 15.13% decline in ETH open interest continues.

PRIMARY SOURCES / REPORTS:

- **CNBC — AI token prices are hitting new record lows** — The extent of new lows across AI tokens, token-level losses and whether the selloff is broadening across crypto.
- **Farside — Bitcoin ETF Flows (All Data)** — The fund-by-fund breakdown of the \$236.5 million outflow on September 1 and the direction of subsequent daily flows.
- **Coinglass — Derivatives Data** — BTC and ETH open interest, funding rates and liquidations to assess how much of the decline reflects deleveraging.

MACRO

Are higher Treasury yields repricing the path to the Fed's September decision?

The 10-year Treasury yield rose to 4.796%, the DXY to 99.81 and MOVE to 77.88, while Nasdaq 100 futures fell 0.59%; this combination warrants examining tighter financial conditions and renewed discount-rate pressure on growth equities. The concrete signals are whether ADP exceeds its 47K forecast and how the September 4 payrolls release compares with the 55K forecast ahead of the September 16 FOMC meeting.

PRIMARY SOURCES / REPORTS:

- **CME FedWatch Tool** — How rate-cut probabilities for the September 16 FOMC change after ADP and employment data.
- **US Treasury — Daily Yield Curve Rates** — The 4.796% 10-year yield in the context of the full curve and short- versus long-term repricing.
- **Federal Reserve — FOMC Calendar & Statements** — The official schedule and statement framework for the September 16 FOMC meeting.

LIQUIDITY

Is the preference for cash temporary risk management or a lasting liquidity-regime shift?

The report that investors are holding their highest cash levels of the year should be read alongside the Fed balance sheet at \$6.73 trillion, down 0.22% weekly and 0.11% monthly, while crypto stablecoin supply rose only 0.0568%. The research question is whether cash is accumulating defensively or awaiting a renewed flow into risk assets; the signals to monitor are the direction of the Fed balance sheet, stablecoin market-cap momentum and a recovery in ETF flows.

PRIMARY SOURCES / REPORTS:

- **Federal Reserve — H.4.1 Balance Sheet Release** — Official weekly changes in total assets, reserves and liquidity conditions on the Federal Reserve balance sheet.
- **DefiLlama — Stablecoins & TVL** — Changes in USDT and USDC market capitalization, total stablecoin growth and its relationship with TVL.
- **CNBC — We're sitting on more cash than at any time this year. Here's why** — The reasons for elevated cash holdings, the portfolio risk-management framework and conditions for redeployment.

—

—

BTC and ETH funding rates are positive at 0.0086% and 0.0123%, respectively, while open interest declined 4.83% for BTC and 15.13% for ETH. This indicates that long-position costs remain positive, but leveraged exposure is being reduced, keeping the signal broadly neutral.

-236.5M	-201.2M	-43.7M

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: On September 1, IBIT saw \$201.2 million of outflows, FBTC \$43.7 million, and total spot Bitcoin ETFs recorded \$236.5 million of net outflows; negative flows indicate selling pressure on spot Bitcoin. ETF flows are not conclusive on their own, but combined with the price decline and negative Coinbase premium, they point to weaker institutional demand in the near term.

TOP STORIES

CNBC · 20:12

OpenAI says Astra AI model is its first that crosses 'Critical' cybersecurity capability

OpenAI said it will make Astra available "soon," but access to its cybersecurity capabilities will be limited.

AI Insight: OpenAI's statement that its Astra model has reached critical cybersecurity capability could support investment in AI infrastructure and cybersecurity, although limited access leaves the near-term revenue impact uncertain. The 0.59% decline in Nasdaq 100 futures and 2.05% drop in SMH suggest that markets have not yet translated the theme into broad-based risk appetite.

CNBC · 19:40

Stan Kroenke buys controlling stake in MLB's Los Angeles Angels

Kroenke Sports and Entertainment was valued at more than \$26 billion in CNBC's most recent list of the world's most valuable sports empire.

AI Insight: Stan Kroenke's acquisition of a controlling stake in the Los Angeles Angels reflects strong institutional demand for sports assets and the strategic value of alternative investments. However, ETF outflows and a negative Coinbase premium indicate that capital allocation in crypto remains more cautious.
