

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Tue, Sep 1 2026

NEUTRAL Macro pressure and selective risk appetite are balancing each other, leaving markets in a neutral regime.

The U.S. 10-year Treasury yield stands at 4.758% after rising 3.8 basis points, while the DXY gained 0.15% to 99.58 and the VIX climbed 6.23% to 15.85. A 0.97% decline in Nasdaq 100 futures signals caution across broad risk assets, although the 0.64% rise in SMH points to relative resilience in semiconductor shares. Brent crude gained 1.90% to \$92.21, increasing sensitivity to inflation and interest-rate risks. Total crypto market capitalization fell to \$2.63 trillion, down 2.92% over 24 hours; Bitcoin dominance was 59.56%, while Fear & Greed remained in Greed at 69. Bitcoin slipped 0.52% over 24 hours but is still up 23.4% over 30 days; strong ETF inflows and elevated ETH funding are supportive, while a negative Coinbase premium and a slight decline in stablecoin market capitalization argue for caution. Eurozone CPI releases and U.S. ISM, JOLTS, ADP and payroll data are due this week; the next FOMC meeting is scheduled for September 16, with the current 2026 median rate projection at 3.8%.

STRATEGIC RESEARCH FOCUS

COMMODITIES

Is the oil shock becoming a durable inflation and rate shock?

After new Middle East attacks, higher oil prices pushed mortgage rates to their highest level since June 2025, while the U.S. 10-year yield reached 4.758% and MOVE rose to 75.32. The research question is whether the energy shock is merely damaging growth expectations or also narrowing the Fed's room to ease through inflation expectations; today's 55.2 ISM manufacturing forecast and the 3.8% daily rise in Treasury yields are the key signals to track together.

PRIMARY SOURCES / REPORTS:

- **EIA — Weekly Petroleum Status Report** — Review weekly crude inventories, production, imports and exports, and refinery utilization to test whether the supply shock is becoming persistent in physical markets.
- **US Treasury — Daily Yield Curve Rates** — Track the daily curve, especially the 10-year yield, to distinguish a rise driven by short-term policy expectations from one driven by longer-term inflation and growth risks.
- **Federal Reserve — FOMC Calendar & Statements** — Ahead of the September 16, 2026 FOMC meeting, examine official communication for how policymakers frame energy-related inflation risks.

EQUITIES

Is buying protection genuinely attractive, or an early warning of a volatility premium?

Citadel says the risk-reward of buying equity-market protection is compelling as a historically difficult month begins; VIX rose 6.23% to 15.85 while Nasdaq 100 futures fell 0.97%. The research question is whether the decline reflects broad risk aversion or a narrowing rotation led selectively by Nvidia and CrowdStrike; the divergence between energy's 2.04% gain and declines in industrials, communication services and real estate is the key cross-check.

PRIMARY SOURCES / REPORTS:

- **CNBC — Risk-reward outlook for stocks is getting worse as historically tough month kicks off, says Citadel** — Examine Citadel's assumptions on risk-reward, seasonality and options-market pricing behind its case for buying protection.
- **CNBC — Why Nvidia and CrowdStrike are up in an otherwise down stock market** — Assess whether Nvidia and CrowdStrike's outperformance reflects company-specific catalysts or narrow leadership in technology and artificial intelligence.
- **SEC EDGAR Full-Text Search** — Compare the latest 10-K, 10-Q and 8-K filings for Nvidia, CrowdStrike, Eli Lilly and GE Vernova for valuation sensitivities, orders, margins and company-specific risk disclosures.

CRYPTO

Do ETF inflows and leveraged Ethereum demand tell the same story?

On August 31, Bitcoin ETFs recorded \$216.7 million of inflows and Ethereum ETFs \$87.6 million, yet total crypto market capitalization fell 2.92% over 24 hours; ETH open interest rose 7.45% and SOL open interest 14.22%. The research question is whether institutional spot demand is producing genuine accumulation or whether rising derivatives leverage is creating a fragile rally; the -0.0259 Coinbase premium and BTC support at 77,447 versus resistance at 79,743 are key confirmation signals.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Check how the \$216.7 million August 31 inflow was distributed across funds and whether the flow is continuing on subsequent days.
- **Farside — Ethereum ETF Flows** — Examine the distribution of the \$87.6 million Ethereum ETF inflow across ETHA and other funds to gauge the breadth of spot demand.
- **Coinglass — Derivatives Data** — Track BTC, ETH and SOL open interest, funding and liquidations together to test how vulnerable price action is to leverage, including ETH funding at 0.0181% and rising open interest.

TOP STORIES

CNBC · 19:09

Risk-reward outlook for stocks is getting worse as historically tough month kicks off, says Citadel

The risk-reward of buying protection in the equity market looks compelling.

AI Insight: Citadel's view that buying equity protection has become attractive is consistent with the 6.23% rise in the VIX, the 4.758% 10-year yield and the 0.97% decline in Nasdaq futures. However, strong ETF inflows and a Fear & Greed reading of 69 show that the market is not in a full risk-off regime.

CNBC · 17:56

Mortgage rates surge to the highest since June 2025 as new Middle East attacks push oil prices up

The expectation had been for falling rates this year, but the war with Iran and its resulting rise in oil prices upended that.

AI Insight: Middle East attacks and higher oil prices are pushing mortgage-rate risks higher; Brent's 1.90% rise to \$92.21, alongside the 4.758% 10-year yield, reinforces rate sensitivity. The development creates downside risk for housing and other interest-rate-sensitive assets within the neutral regime.
