

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Fri, Sep 4 2026

RISK-ON Rising equities, crypto assets and ETF inflows point to strong risk appetite.

Markets are displaying a broad-based advance consistent with a **RISK_ON** regime: Nasdaq 100 futures rose 0.40%, SMH gained 0.39% and major technology stocks advanced, while the VIX declined to **14.24**. The U.S. 10-year Treasury yield fell 3.4 basis points to **4.762%**, while a 0.11% rise in the DXY created only modest pressure on risk assets. Total crypto market capitalization increased 1.20% to **\$2.72 trillion**, with BTC up 4.49%, ETH 5.41% and XRP 6.60%; the Fear & Greed index stood at 74, or Greed, and BTC dominance was 59.76%. Brent crude gained 6.76% on the week to \$95.35, showing that US-Iran tensions are increasing inflation and supply risks even as risk assets have so far absorbed the shock. Today's U.S. nonfarm payrolls, average hourly earnings and unemployment data will be crucial for rate expectations and the durability of the rally ahead of the September 16 FOMC decision.

STRATEGIC RESEARCH FOCUS

COMMODITIES

Can the Hormuz risk turn the oil shock into a lasting supply crisis?

The intensifying US-Iran conflict and South Korea's review of Hormuz options require investors to determine whether oil's weekly gain reflects a temporary geopolitical premium or expectations of physical supply disruption. The concrete signal to monitor is whether increased military engagement around Hormuz is accompanied by deterioration in EIA inventory, production, or export data.

PRIMARY SOURCES / REPORTS:

- **Reuters — Oil prices set for weekly gain as US-Iran hostilities intensify - Reuters** — The drivers of oil's weekly move, the supply risk, and the market's response to the geopolitical premium.
- **EIA — Weekly Petroleum Status Report** — Crude and product inventories, refinery utilization, production, and import-export flows that could confirm a supply shock.
- **Reuters — South Korea reviewing military options for Hormuz, no decision made, official says - Reuters** — South Korea's potential military role in Hormuz and whether it raises the risk to maritime transport.

MACRO

Will the jobs report reprice the Fed’s September 16 decision?

Today’s payrolls consensus is 55K, with unemployment expected at 4.1% and average hourly earnings at 0.3% month over month, versus a previous employment change of -23K. The research question is whether weak hiring and wage pressure arrive together, and how that combination changes the 4.762% 10-year yield, the DXY, and pricing for the FOMC in 12 days; the key threshold is the report’s deviation from consensus across payrolls, wages, and unemployment.

PRIMARY SOURCES / REPORTS:

- **BLS — Employment Situation (NFP)** — Nonfarm payrolls, unemployment, average hourly earnings, and employment revisions.
- **Federal Reserve — FOMC Calendar & Statements** — The official September 16, 2026 FOMC schedule and the decision/statement to be released.
- **CME FedWatch Tool** — How interest-rate futures reprice expectations for the FOMC after the employment report.

CRYPTO

Are ETF inflows driving crypto through spot demand or leverage?

Bitcoin ETFs recorded \$730.8 million of inflows and Ethereum ETFs \$141.4 million on September 3, while total crypto market capitalization rose 1.20% in 24 hours; however, ETH open interest increased 22.73%, SOL funding reached 0.1331%, and the Coinbase premium fell to -0.1357%. The research question is whether strong ETF flows represent durable spot demand or a rally made fragile by derivatives leverage; Bitcoin’s 81,739.995 resistance and 78,721.995 support should be monitored alongside funding, open interest, and the Coinbase premium.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Fund-level composition and persistence of the \$730.8 million total Bitcoin ETF inflow on September 3.
- **Farside — Ethereum ETF Flows** — Fund-level composition of the \$141.4 million Ethereum ETF inflow on September 3.
- **Coinglass — Derivatives Data** — BTC, ETH, and SOL funding rates and open-interest changes to assess whether ETF inflows are being amplified by leverage.

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: Spot Bitcoin ETFs recorded \$730.8 million of total inflows on September 3, including \$454.0 million into IBIT and \$74.4 million into FBTC. Positive flows indicate institutional buying pressure, but the unusually strong one-day inflow should be monitored alongside price action because a reversal could create selling pressure.

TOP STORIES

REUTERS · 01:28

Oil prices set for weekly gain as US-Iran hostilities intensify - Reuters

AI Insight: The 6.76% weekly rise in oil increases geopolitical supply and inflation risks, but the VIX at 14.24, a 0.40% gain in Nasdaq futures and strong ETF inflows show that markets have not yet converted the shock into broad risk-asset selling.

REUTERS · 23:57

US probes Iran wedding strike that analysis shows was likely direct hit by US munition - Reuters

AI Insight: The investigation into the Iranian wedding strike could increase the conflict’s humanitarian and political costs, raising the geopolitical risk premium. Nevertheless, BTC rose 4.49% and spot Bitcoin ETFs attracted \$730.8 million, suggesting institutional demand is currently offsetting the uncertainty in the news flow.

REUTERS · 22:13

Deadly strike on Iranian wedding was likely a direct hit by a US munition, analysis shows - Reuters

AI Insight: Analysis indicating a likely direct hit by a U.S. munition keeps escalation risk elevated; Brent’s 15.59% 30-day gain highlights the market relevance of that channel. Coinbase premium slipped to -0.136% even as ETF demand remained strong, pointing to institutional support alongside near-term caution in U.S. spot demand.
