Global Macro & Crypto Market Intelligence

Thu, Jul 30 2026

RISK-OFF A divided Fed, surging Treasury yields, and escalating geopolitical tensions keep risk appetite firmly suppressed.

Markets are navigating a confluence of macroeconomic and geopolitical headwinds today. The Fed **held rates steady at 3.75%** at its July 29 FOMC meeting, but a divided vote rattled investor confidence and fueled a renewed Treasury sell-off, pushing the US 10-Year yield to **4.62%**. Critically, today's calendar features the **Core PCE Price Index** (forecast: 0.2% MoM) and **Advance GDP** (forecast: 2.1% QoQ), two releases that will heavily shape the Fed's next move at the September 16 meeting. In crypto, the Fear & Greed Index sits at **28 (Fear)**, with BTC dominance at **56.5%** continuing to weigh on altcoins, while total crypto market cap holds at **\$2.27 trillion**. The VIX at **19.82** signals elevated anxiety without full panic. On the geopolitical front, US military strikes on Iran and Strait of Hormuz supply disruptions are amplifying risk-off sentiment across asset classes.

STRATEGIC RESEARCH FOCUS

MACRO

Divided Fed Holds Rates, 10-Year Yield Surges to 4.62% — GDP and Core PCE Due Today

The Fed held rates steady at 3.75% on July 29 in a divided vote, amplifying uncertainty about the timing of the next move. The 10-year Treasury yield climbed to 4.62% while the 2-year held at 4.26%, widening the 2s10s spread to 36 basis points — signaling that long-term inflation/term premium is being priced in. Today (July 30) at 15:30, Advance GDP (prior 2.0%, forecast 2.1%) and Core PCE MoM (prior 0.3%, forecast 0.2%) will directly drive pricing for the September 2026 FOMC meeting (48 days away). Key threshold to watch: if Core PCE prints above expectations, monitor whether the 10-year tests the 4.70% resistance and whether September cut odds on CME FedWatch retreat.

PRIMARY SOURCES / REPORTS:

- **CNBC — Fed Rate Decision and Treasury Sell-Off** — Read the full article to confirm the Fed's split vote breakdown, individual member rationale, and the market's initial reaction.
- **Federal Reserve — FOMC Calendar & Statements** — Access the full July 29 FOMC statement text; check which members dissented and whether the tone of 'data dependent' language has shifted.
- **CME FedWatch Tool** — Check the cut/hold probability distribution for the September 2026 meeting; track how probabilities shift after today's GDP and PCE releases.
- **US Treasury — Daily Yield Curve Rates** — Confirm July 30 2-year and 10-year yield levels; compare the pace of curve steepening against the prior week.

COMMODITIES

US Strikes Iran, QatarEnergy Buys 33 US LNG Cargoes — How Is the Hormuz Risk Actually Being Priced?

US military forces conducted new strikes on Iran lasting two hours and hitting dozens of targets. Simultaneously, QatarEnergy purchased 33 US LNG cargoes to offset Hormuz Strait transit risk. Despite this, oil prices slipped as markets awaited clearer signals on Gulf supply flows. This contradictory pricing (geopolitical escalation + oil decline) raises a critical research question: has the market genuinely not priced in a Hormuz closure risk, or has supply rerouting (US LNG, alternative routes) absorbed that risk? Key signals to watch: EIA weekly petroleum stock data and US LNG export terminal capacity utilization rates.

PRIMARY SOURCES / REPORTS:

- **Reuters — QatarEnergy Buys 33 US LNG Cargoes** — Identify which US terminals the 33 cargoes originate from, the delivery timeline, and whether the deal is spot or forward — to assess scale of Hormuz bypass.
- **Reuters — US Military Latest Strikes on Iran** — Read the full article to assess the nature of targeted facilities (nuclear infrastructure vs. naval assets) and Iran's retaliatory capacity in the strait.
- **Reuters — Oil Slips as Markets Look for Gulf Supply Cues** — Read the analyst commentary on why oil declined despite geopolitical escalation and how the Hormuz risk premium is being priced into the market.
- **EIA — Weekly Petroleum Status Report** — Check the latest weekly US crude oil and distillate inventory data; stock changes will reveal the buffer capacity to absorb a potential Gulf supply disruption.

CRYPTO

Coinbase Negative Premium Deepens, ETH ETF Outflows Continue — Is US Institutional Demand Structurally Weakening?

The Coinbase premium has been persistently negative for over a week, deepening to -0.148 today — signaling that US retail/institutional buyers are transacting below global spot price. In the same period, ETH spot ETFs recorded net outflows of \$32.9M while BTC ETFs showed only a modest \$32.1M net inflow. The broader crypto fear & greed index sits at 28 ('Fear'). The research question: does this negative premium and ETH ETF outflow indicate structural versus temporary weakening of US institutional demand? Key threshold to watch: a sustained Coinbase premium break below -0.15 on BTC and a third consecutive day of ETH ETF outflows.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Compare July 29 fund-level flows (IBIT +\$89.8M, FBTC -\$43.1M) to identify which fund(s) are driving the net inflow and where outflows are concentrated.
- **Farside — Ethereum ETF Flows** — Analyze the fund-level breakdown of the July 29 total -\$32.9M outflow (FETH -\$16.1M, ETHA +\$5.2M); check the 3-day trend for outflow persistence.
- **Glassnode Insights** — Review BTC and ETH spot exchange net flow data to determine whether the Coinbase negative premium stems from exchange-level selling pressure or market-maker arbitrage dynamics.

--	-------------------------------	------------------------------------

Analyst Note: The 2s10s spread at +36.2 basis points reflects a continuing yield curve normalization, suggesting that long-term growth expectations have not fully collapsed. Meanwhile, the SMH Semiconductor ETF's sharp -4.79% decline—led by NVIDIA's -3.55% drop—confirms that risk-off sentiment is concentrated in high-beta growth and tech names, a pattern that historically pressures speculative crypto assets as well.

DERIVATIVES DESK

—

—

BTC funding rates stand at 0.0114% and ETH at 0.0138%, indicating that long positions remain dominant in perpetual futures markets; however, combined with the current price weakness, this elevated funding creates a squeeze risk if spot selling pressure intensifies. The persistently negative Coinbase premium (-0.148) further signals weak US retail demand for BTC.

+32.1M	+89.8M	-43.1M

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: July 29 ETF data shows IBIT recorded a +\$89.8M inflow while FBTC saw a -\$43.1M outflow, resulting in a net total flow of +\$32.1M—a moderate positive reading. However, context matters: the prior streak of outflows between July 23–28 totaled approximately -\$526.5M, suggesting this single-day recovery does not yet confirm a sustained return of institutional buying appetite.

Treasury sell-off continues after divided Fed holds interest rates steady

U.S. Treasury yields continued their upward climb on Thursday as investors weighed the Federal Reserve's decision to hold interest rates steady.

AI Insight: The Fed's decision to hold rates at 3.75% with a divided vote deepened uncertainty rather than providing market clarity; the continued Treasury sell-off and the 10-Year yield rising to 4.62% signal that bond markets are not pricing in near-term cuts. This higher-for-longer backdrop is a direct headwind for BTC, which is struggling to hold above \$63,934 with a bearish 4H technical structure.

REUTERS · 05:03

EXCLUSIVE: QatarEnergy buys 33 US LNG cargoes to offset Hormuz disruption, sources say - Reuters

AI Insight: QatarEnergy's purchase of 33 US LNG cargoes to offset Hormuz disruption underscores the structural supply shock rippling through global energy markets; this development supports the Energy sector (XLE: +1.88%) as today's top-performing S&P sector, while also raising broader inflation risk that could complicate the Fed's path toward easing.

REUTERS · 04:15

US military says latest strikes on Iran last two hours, hitting dozens of targets - Reuters

AI Insight: US military strikes on Iran spanning two hours and dozens of targets represent a material escalation in Middle East geopolitical risk; historically, such conflict escalations drive safe-haven flows into gold—which is up +1.64% to \$4,100 today—while triggering short-term risk-off pressure on crypto assets already trading near key support at \$63,371.
