

DAILY FINANCIAL BULLETIN

Global Macro & Crypto Market Intelligence

Tue, Sep 15 2026

RISK-OFF Elevated bond volatility, a firmer dollar and weakening risk indicators confirm that markets remain in a risk-off regime.

Global markets are showing a clear risk-off bias: the VIX rose to **17.43**, MOVE reached **83.90**, and the DXY edged higher to **99.61**. The US 10-year Treasury yield remained elevated at **4.96%**, while a **3.39%** decline in the copper-gold ratio points to weaker growth expectations and risk appetite. Total crypto market capitalization fell **3.96%** over 24 hours to **\$2.62 trillion**, with BTC down **1.26%** and ETH down **1.61%**. Although the Fear & Greed index remains in Greed at 69, a Coinbase premium of **-0.158%** and falling open interest suggest softer spot demand and reduced leverage appetite. Tomorrow's Fed rate decision, FOMC statement and economic projections, alongside expectations for a policy rate of **4.00%**, remain key volatility catalysts amid high yields and geopolitical risks.

STRATEGIC RESEARCH FOCUS

MACRO

Pre-FOMC bond shock: will the Fed's projections validate elevated yields?

The US 10-year Treasury yield reached 4.960999965697725 as bonds fell toward their highest yield level since 2007; the September 16 FOMC decision and projections will test whether the move reflects growth and inflation expectations or a higher-for-longer repricing. Focus on the gap between the 4.00% policy-rate forecast and the 3.8% 2026 median dot, and on the 10-year yield's direction after the decision.

PRIMARY SOURCES / REPORTS:

- **Federal Reserve — FOMC Calendar & Statements** — Read the September 16 FOMC decision for the policy rate, guidance, and changes to inflation and employment assessments.
- **US Treasury — Daily Yield Curve Rates** — Compare the 10-year yield and the broader curve before and after the FOMC decision.
- **CME FedWatch Tool** — Track changes in implied rate-path probabilities and the pricing of a 4.00% policy rate before and after the decision.

COMMODITIES

How persistent is the disruption to oil flows from the Hormuz risk?

Declining Hormuz traffic amid intensifying Middle East attacks creates a supply and logistics risk that contrasts with China's higher August oil throughput and rebounding fuel exports. The key research question is whether the physical-flow disruption is a temporary security premium or a lasting shock to refinery inputs and export chains; monitor Chinese throughput, fuel exports, and weekly US inventory changes together.

PRIMARY SOURCES / REPORTS:

- **Reuters — Hormuz traffic dwindles after Middle East attacks intensify - Reuters** — Examine the scale and persistence of the decline in Hormuz tanker traffic and which flows are affected.
- **Reuters — China's August oil throughput rises as fuel exports rebound amid Iran war - Reuters** — Read the details on China's August crude throughput and rebounding fuel exports, and how they interact with war-related supply risk.
- **EIA — Weekly Petroleum Status Report** — Track weekly US crude, gasoline, and distillate inventories and refinery utilization as physical confirmation of a supply shock.

CRYPTO

What does deleveraging signal while institutional crypto inflows persist?

Total crypto market capitalization fell 3.957258993149029% in 24 hours even as Bitcoin and Ethereum ETFs recorded inflows of \$159.9 million and \$121.1 million; open interest declined 9.95243279207224% for BTC and 7.566736248344394% for ETH, while the Coinbase premium fell to -0.15778215830723852. The research question is whether ETF demand represents genuine spot accumulation or is merely offsetting derivatives deleveraging; monitor Bitcoin's 76532.08 support, 78453.79 resistance, ETF flows, and funding together.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Check the fund-level breakdown of the September 14 Bitcoin ETF inflow of \$159.9 million and whether it persists on subsequent sessions.
- **Farside — Ethereum ETF Flows** — Examine the September 14 Ethereum ETF inflow of \$121.1 million, including the contributions from ETHA and FETH and the subsequent flow trend.
- **Coinglass — Derivatives Data** — Compare BTC and ETH open interest, funding rates, and liquidation data with ETF flows to measure the extent of deleveraging.

MODERATE INFLOW

TOTAL FLOW	IBIT (BLACKROCK)	FBTC (FIDELITY)
+159.9M	+134.3M	+53.3M

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: On September 14, IBIT recorded \$134.3 million of inflows, FBTC \$53.3 million, and total spot Bitcoin ETFs \$159.9 million; these flows provide near-term buying support. ETF inflows are not sufficient on their own to confirm a trend: continued inflows during price weakness may signal absorption, while a reversal into outflows would indicate renewed selling pressure.

TOP STORIES

CNBC · 10:00

Children's clothing retailer Carter's is rebranding to appeal to a new generation of parents

Children's clothing brand Carter's is announcing a rebrand as it tries to keep up with the modern parent and its core customer base.

AI Insight: Carter's rebranding is primarily a consumer-behavior and brand-refresh initiative, but high Treasury yields and a risk-off backdrop can make restructuring investment more difficult to finance for discretionary consumer companies.

REUTERS · 05:12

China's August oil throughput rises as fuel exports rebound amid Iran war - Reuters

AI Insight: China's higher August oil throughput and rebound in fuel exports suggest resilient energy demand, but Brent's decline of 3.06% over 24 hours to \$102.45 shows that the market is repricing the supply-demand outlook alongside geopolitical risk.

REUTERS · 02:59

Hormuz traffic dwindles after Middle East attacks intensify - Reuters

AI Insight: Falling traffic through the Strait of Hormuz raises tail risks for energy supply chains. Despite Brent being up 15.74% over 30 days, the daily pullback highlights exceptionally volatile pricing amid elevated MOVE, a firmer dollar and risk aversion.
