Global Macro & Crypto Market Intelligence

Tue, Aug 4 2026

NEUTRAL Geopolitical risk lifts oil while crypto lingers in 'Extreme Fear' — markets are searching for direction.

As of August 4, 2026, markets are caught in the crossfire of Iran-driven geopolitical tension and persistent macro headwinds. **Brent crude** fell **5.9%** on the day to **\$84.80**, even as Aramco's 44% profit surge underscores how the Iran conflict has reshaped energy economics. On the macro front, the **US 10-Year Treasury Yield** climbed to **4.74%** while the VIX eased to **15.7**, signaling relative calm in equities that has yet to translate to crypto. The **Crypto Fear & Greed Index** sits at **25 — Extreme Fear**, with BTC holding at **\$63,621** and BTC dominance at **56.4%**, confirming continued pressure on altcoins. NASDAQ 100 Futures rallied **2.3%** to 29,071, driven by a strong earnings season, but this risk-on impulse has not yet spilled into digital assets. Investors this week are squarely focused on Friday's **Non-Farm Payrolls** report; the consensus of 85K versus the prior 57K will directly shape expectations for the Fed's September FOMC decision. The 2Y-10Y spread at **+46.5 bps** confirms the yield curve's ongoing normalization.

STRATEGIC RESEARCH FOCUS

COMMODITIES

Hormuz Risk & Aramco Earnings: Where Is the Ceiling on Geopolitical Oil Pricing?

The Iran war-driven surge in oil prices lifted Aramco's net profit by 44%; on the same day a vessel was struck in the Strait of Hormuz and the status of US-Iran talks turned uncertain. Meanwhile, OPEC+'s planned output hike is described as currently irrelevant for prices. The key research question: how sustainable is the geopolitical risk premium, and where does the price ceiling form once OPEC+ supply comes online? Signal to watch: EIA weekly crude inventory change and any new developments in Hormuz transit news.

PRIMARY SOURCES / REPORTS:

- **Reuters — Aramco 44% Profit Rise** — Review Aramco's Q2 net profit figure, oil price assumptions embedded in guidance, and dividend commitment language.
- **Reuters — Ship Struck in Hormuz & US-Iran Talks** — Read incident details in the Strait of Hormuz and the latest negotiation status; assess closure risk language.
- **EIA — Weekly Petroleum Status Report** — Check the latest weekly crude stock change and refined product inventories to gauge the demand-side counterpart to the geopolitical risk premium.

MACRO

10-Year at 4.74% on NFP Week: Will Jobs Data Reprice the Fed Path?

The US 10-year Treasury yield has risen to 4.74% (+1.76 bps in 24 hours) as this Friday's Non-Farm Payrolls report approaches. The prior reading was 57,000 against a consensus of 85,000, and the outcome will directly shape market pricing for the September 2026 FOMC meeting. The 2s10s spread has widened to 46.5 bps. The research question: if NFP prints below 85,000, will markets fully price a September cut, or does the 4.74% long-end yield already reflect that expectation? Signal to watch: September cut probability on CME FedWatch.

PRIMARY SOURCES / REPORTS:

- **BLS — Employment Situation (NFP)** — On Friday's release, compare the headline NFP number against the 85K consensus, average hourly earnings (0.3% MoM expected), and the unemployment rate (4.2% expected).
- **CME FedWatch Tool** — Track the September 2026 FOMC cut probability before and after the NFP print; focus on whether a 25 bps cut is fully priced in.
- **US Treasury — Daily Yield Curve Rates** — Pull current 2-year and 10-year yields to monitor how the 2s10s spread responds to the NFP outcome.

CRYPTO

BTC ETF Inflows vs. Fear Index at 25: Can Institutional Buying Absorb Retail Panic?

As of August 3, Bitcoin spot ETFs recorded total inflows of \$170.1M (IBIT alone: \$111.4M), yet the Fear & Greed Index sits at 25 ('Extreme Fear') and the Coinbase premium has remained persistently negative over recent weeks. ETH ETFs saw \$11.9M in outflows. The research question: with institutional ETF inflows continuing but the Coinbase premium negative and retail demand weak, can ETF buying hold the \$62,971 support floor, or will sentiment drag BTC below it? Signal to watch: BTC \$62,971 support break and daily ETF flow direction.

PRIMARY SOURCES / REPORTS:

- **Farside — Bitcoin ETF Flows (All Data)** — Review daily flows by fund to confirm which issuers are driving the \$170.1M total inflow and whether the trend is holding or decelerating.
- **Farside — Ethereum ETF Flows** — Verify the \$9M ETHA and \$0.9M FETH outflows; assess whether ETH ETF redemptions are contributing to rising BTC dominance (56.38%).
- **Glassnode Insights** — Investigate what the persistently negative Coinbase premium signals about on-chain demand structure and the divergence between institutional and retail buyers.

BTC DOMINANCE

56.4%

24H TOTAL VOLUME

\$56.6B

Analyst Note: The 2Y-10Y spread at +46.5 bps continues to signal yield curve normalization, historically supportive of economic activity expectations. The combined stablecoin market cap holding steady at \$255.1 billion suggests no major fresh capital is yet rotating into crypto, while the Copper/Gold ratio's 3.3% rise signals real-economy demand recovery on the commodity side.

Reading Guide: Positive values indicate US institutional buying pressure. Sustained positive premium is a bullish signal for BTC.

FEAR & GREED

FUTURES TERM STRUCTURE & POSITIONING

NEUTRAL

BTC BASIS ETH BASIS

— —

BTC's funding rate stands at a mildly positive 0.0081%, suggesting longs are being maintained without signs of overheating — a cautious stance consistent with the prevailing 'Extreme Fear' sentiment. ETH funding at 0.0027% is near neutral, indicating no strong directional bias in perpetual futures at this stage.

SPOT ETF FLOWS HISTORY (LAST 10 DAYS)

Analyst Note: Spot Bitcoin ETFs recorded total inflows of \$170.1M on August 3, 2026, led by IBIT at \$111.4M and FBTC at \$33.4M — a meaningful reversal from the \$265.4M outflow seen on July 31, suggesting institutional dip-buying interest remains intact. In contrast, ETH ETFs saw \$11.9M in outflows, a divergence that warrants close attention.

TOP STORIES

REUTERS · 06:05

Aramco posts 44% rise in net profit as Iran war drives up oil prices - Reuters

AI Insight: Aramco's 44% net profit surge provides hard evidence of how the Iran conflict has driven energy revenues higher; however, today's 5.9% Brent decline suggests the war premium is at least partially priced in, highlighting the two-way volatility risk that geopolitical uncertainty creates in oil markets.

REUTERS · 06:00

OPEC+ oil output hike is irrelevant for now, not for later - Reuters

AI Insight: The characterization of the OPEC+ output hike as 'irrelevant for now' confirms that supply constraints are supporting prices in the near term, but the medium-term risk of additional supply hitting the market remains a headwind for energy bulls — a dynamic that could weigh on risk appetite if oil slides further.

REUTERS · 05:08

Toyota lifts annual forecast despite Q1 profit drop on weak China sales - Reuters

AI Insight: Toyota raising its annual outlook despite a Q1 profit miss on weak China sales signals growing diversification away from China-dependency and confidence in recovery across other markets; this fits the broader strong-earnings narrative underpinning the NASDAQ 100's 2.3% futures gain.
