

WEEKLY DEEP DIVE

Strategic Liquidity, Macro Themes & Crypto Rotation

Sun, Aug 9 2026

NEUTRAL Mixed macro signals and selective risk appetite keep markets balanced and searching for direction.

The week produced a split picture between US rates and geopolitical risks. Bitcoin gained **3.4%** to **\$65,210**, while Ethereum rose **3.9%**; total crypto market capitalization increased only **0.23%** over 24 hours. Spot Bitcoin ETFs recorded **\$865.3 million** of weekly inflows and Ethereum ETFs added **\$243.7 million**, signaling a clear recovery in institutional demand. The key catalyst next week is US inflation, with forecasts of **3.4%** headline CPI and **2.5%** core CPI year over year.

THREE THEMES OF THE WEEK

THEME 1 · **SELECTIVE RECOVERY**

Bitcoin and Ethereum rose 3.4% and 3.9% respectively, while Solana outperformed with a 5.9% gain. Losses in XRP, TON and JUP show that buying remains selective rather than a broad-based risk rally.

THEME 2 · **ETF FLOWS**

Combined IBIT and FBTC inflows of \$865.3 million reversed the previous week's \$61.5 million outflow and point to stronger institutional demand. Ethereum ETF inflows of \$243.7 million also broadened the recovery across major assets.

THEME 3 · **MACRO BALANCE**

A 0.37% decline in DXY, a VIX reading of 14.9 and a 13-basis-point tightening in high-yield spreads support risk assets. However, the 2-year Treasury yield rose 1.67%, while moves in gold and oil show that geopolitical and inflation risks remain active.

Weekly Outlook & Strategy: The base case for next week is choppy, selective trading between support at \$61,528 and resistance at \$74,053 ahead of CPI. A downside CPI surprise could help Bitcoin target \$70,000 alongside ETF inflows, while an upside surprise could pressure risk appetite through the dollar and Treasury yields.

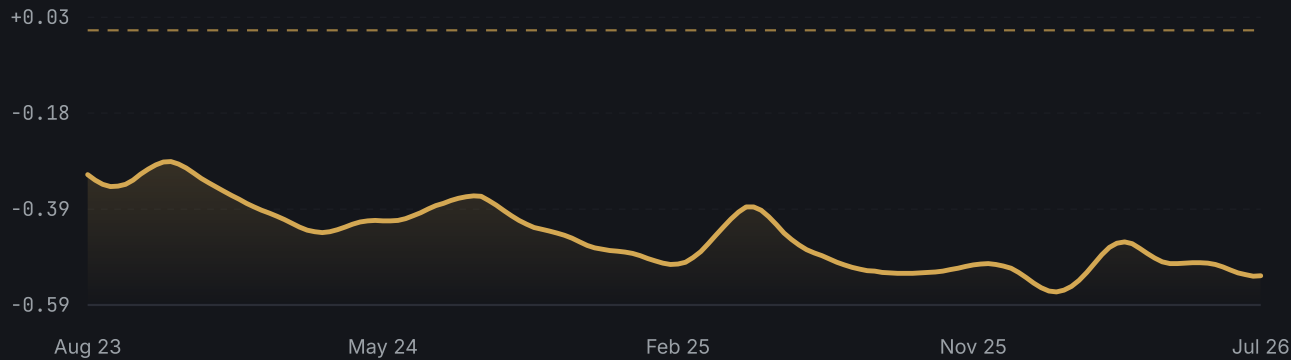

LIQUIDITY REGIME

Chicago Fed Financial Conditions Index — NFCI (3-Year Weekly)

-0.529 (+0.001 w/w)

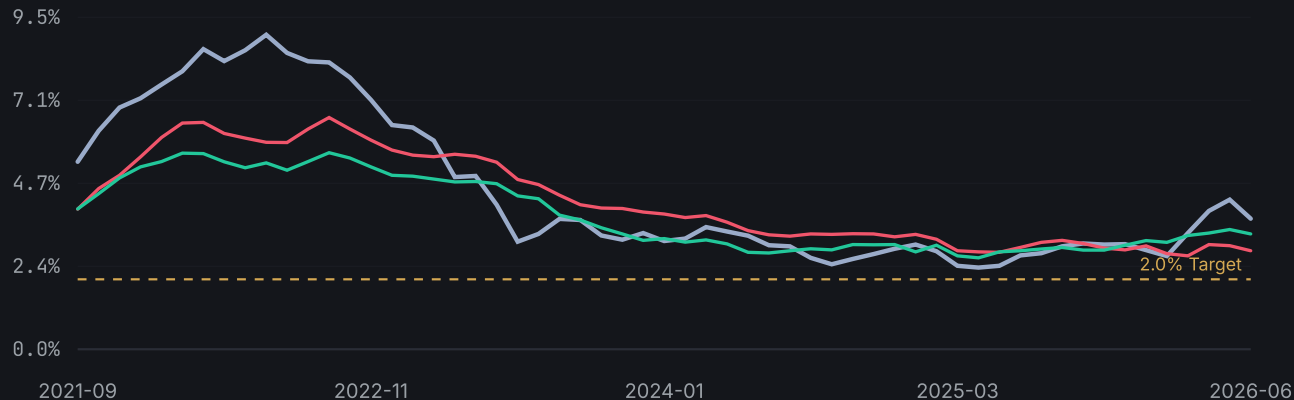

Above 0 = tighter-than-average conditions, below 0 = looser.

Analyst Note: The Fed balance sheet rose 0.15% weekly to \$6.75 trillion, while net liquidity increased to \$5.840 trillion; the pace remains too modest to represent a powerful liquidity impulse. M2 reached \$23.16 trillion after growing 0.43% monthly, providing medium-term support while keeping the near-term liquidity picture neutral.

Analyst Note: Bitcoin at \$65,207 is only 2.24% above its 200-week moving average of \$63,778; the Mayer multiple is 0.93 and the drawdown from the all-time high is 47.73%. These readings do not indicate long-term overvaluation, but the bearish 4-hour trend and Coinbase premium of -0.076% warn that the recovery lacks full confirmation.

Iran says Oman deal is in 'final stages' but US must act to open Hormuz - Reuters

AI Insight: The report that Iran-Oman talks are in their final stages raises the possibility of reopening the Strait of Hormuz and reducing energy-supply risk, although the required US action remains uncertain. The geopolitical discount is therefore not fully removed, especially ahead of next week's CPI release.

Syria and Russia reach deal on future of Tartous and Hmeimim bases after 18 months of talks - Reuters

AI Insight: The agreement on the future of the Tartous and Hmeimim bases could institutionalize Russia's military presence in Syria and alter the Eastern Mediterranean balance. Its market relevance is indirect, operating mainly through energy, geopolitical risk premia and safe-haven demand rather than as a direct crypto catalyst.

Analyst Note: Developments involving Hormuz, Gaza and Russian-Syrian military bases keep energy-supply and geopolitical risk premia elevated. Brent rose to \$83.55 but fell 7.29% on the week, suggesting that markets are pricing headline risk without yet confirming a lasting supply shock.
